

Appendix 4: Long-list of projects

Part A: Long-list of projects, column 1-6

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
(none)	Scenarios for a sustainable society: Car transport systems and the sociology of embedded technologies	FP4-TSER	1998-2000	https://cordis.europa.eu/project/rcn/41888/factsheet/en	CORDIS
3IBS	The Intelligent, Innovative, Integrated Bus Systems	FP7-TRANSPORT	2012-2015	https://cordis.europa.eu/project/rcn/05454/reporting/en	CORDIS
A Lab Vertical Farm	A Lab Vertical Farm	unknown	2019	https://www.a-lab.nl/events/opening-lab-vertical-farm	social media
ACCEPT PLURALISM	Tolerance, Pluralism and Social Cohesion. Responding to the Challenges of the 21st Century in Europe	FP7-SSH	2010-2013	https://cordis.europa.eu/project/rcn/93998/reporting/en	CORDIS
ACCESS 2 ALL	Mobility Schemes Ensuring Accessibility of Public Transport for All Users	FP7-TRANSPORT	2008-2010	http://access-to-all.eu/	CORDIS
ACT	Low energy aeration solution for waste water treatment plants using hydrodynamic cavitation technology.	H2020-EU.3., H2020-EU.2.3., H2020-EU.2.1.	2018	https://cordis.europa.eu/project/rcn/217272/factsheet/en	CORDIS
ACT	Communities of PrACTice for Accelerating Gender Equality and Institutional Change in Research and Innovation across Europe	H2020-EU.5.f. and H2020-EU.5.b.	2018-2021	https://cordis.europa.eu/project/rcn/218467/factsheet/en	CORDIS
ADDRESS	Active Distribution networks with full integration of Demand and distributed energy RESources	FP7-ENERGY	2008-2013	http://www.addressfp7.org/	CORDIS
ADFC	Allgemeiner Deutsche Fahrrad Club			https://www.adfc-dresden.de/	
AEOLUS4FUTURE	Efficient harvesting of the wind energy	H2020-EU.1.3.1.	2015-2018	http://www.aeolus4future.eu/	CORDIS
AGAPE	Exploring Anti-Gentrification Practices and policies in Southern European Cities	FP7-PEOPLE	2014-2016	https://cordis.europa.eu/project/rcn/88216/factsheet/en	CORDIS
ALICE RAP	Addictions and Lifestyles In Contemporary Europe – Reframing Addictions Project	FP7-SSH	2011-2016	https://cordis.europa.eu/project/rcn/99644/reporting/en	CORDIS
ALLIANCE	Enhancing excellence and innovation capacity in sustainable transport interchanges	H2020-EU.4.b.	2016-2018	http://alliance-project.eu/	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
ALTERNATIVE	Developing alternative understandings of security and justice through restorative justice approaches in intercultural settings within democratic societies	FP7-SECURITY	2012-2016	http://www.alternativeproject.eu/	CORDIS
APRAISE	Assessment of Policy Impacts on Sustainability in Europe	FP7-ENVIRONMENT	2011-2014	https://cordis.europa.eu/project/rcn/00557/reporting/en	CORDIS
ARABTRANS	Political and social transformations in the Arab world	FP7-SSH	2013-2016	https://cordis.europa.eu/project/rcn/07820/reporting/en	CORDIS
ARTS	Accelerating and Rescaling Transitions to Sustainability	FP7-ENVIRONMENT	2013-2016	http://www.acceleratingtransitions.eu/ https://cordis.europa.eu/project/rcn/10573/reporting/en	CORDIS
ASPA	Activating Senior Potential in Ageing Europe	FP7-SSH	2008-2011	https://www.aspa-eu.com/	CORDIS
Atlantic Social Lab	Atlantic Social Lab	INTERREG Atlantic Area	2018-now	http://atlanticsociallab.eu/	social media
BASE	Bottom-up Climate Adaptation Strategies towards a Sustainable Europe	FP7-ENVIRONMENT	2012-2016	http://base-adaptation.eu	CORDIS
BBM	Budapest Bike Maffia	unknown	unknown	http://bbm.hu/en/about-us/	
BEACON	Bridging European and Local Climate Action	EUKI - BMU (German Environmental Ministry)	2018-2019	https://www.euki.de/en/euki-projects/bridging-european-and-local-climate-action-beacon/	other (add to comment)
Bellidea	Bellidea	JPI Urban Europe	unknown	www.bellidea.ch	social media
BESSE	Brokering Environmentally Sustainable Sanitation for Europe	FP7-ENVIRONMENT	2009-2012	https://cordis.europa.eu/project/rcn/92733/reporting/en	CORDIS
BEUCITIZEN	All Rights Reserved? Barriers towards European CITIZENship	FP7-SSH	2013-2017	https://beucitizen.eu/	CORDIS
BEWATER	Making society an active participant in water adaptation to global change	FP7-SIS	2013-2017	http://www.bewaterproject.eu/	CORDIS
BIOMAN	Economically efficient biogas production from manure fibres and straw	FP7-SME	2012-2015	https://cordis.europa.eu/project/rcn/05078/reporting/en	CORDIS
BIOWALK4BIOFUELS	Biowaste and Algae Knowledge for the Production of 2nd Generation Biofuels	FP7-ENERGY	2010-2015	https://cordis.europa.eu/project/rcn/94338/reporting/en	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
BRAINPOOL	BRinging Alternative INDicators into POLicy	FP7-ENVIRONMENT	2011-2014	https://cordis.europa.eu/project/rcn/00577/reporting/en	CORDIS
CAPHAZ-NET	Social Capacity Building for Natural Hazards: Toward More Resilient Societies	FP7-ENVIRONMENT	2009-2012	https://cordis.europa.eu/project/rcn/91264/reporting/en	CORDIS
CASCADE	Collaborative Action towards Societal Challenges through Awareness, Development, and Education	FP7-INCO	2013-2015	https://cordis.europa.eu/project/rcn/10367/reporting/en	CORDIS
CCSC	Cultural and Creative Spaces and Cities	Creative Europe Programme	2018-	http://www.creativespacesandcities.com/	social media
CD-LINKS	Linking Climate and Development Policies - Leveraging International Networks and Knowledge Sharing	H2020 - EU.3.5.1	2015-2019	https://cordis.europa.eu/project/rcn/96822/factsheet/en	CORDIS
CEECEC	CSO engagement with ecological economics	FP7-SIS	2008-2010	https://cordis.europa.eu/project/rcn/87596/brief/en	CORDIS
CESBA MED	Sustainable MED Cities	Interreg Mediterranen	unknown	https://cesba-med.interreg-med.eu/	social media
CESINE	Conservation and Ecosystem Services In the New biodiversity Economy	FP7-PEOPLE	2014-2016	https://cordis.europa.eu/project/rcn/87696/reporting/en	CORDIS
CHANCE2SUSTAIN	Urban Chances: City growth and the sustainability challenge; Comparing fast growing cities in growing economies	FP7-SSH	2010-2014	https://cordis.europa.eu/project/rcn/94549/reporting/en	CORDIS
CIPRNET	Critical Infrastructure Preparedness and Resilience Research Network	FP7-SECURITY	2013-2017	https://ciprnet.eu/home/	CORDIS
CITI-SENSE	Development of sensor-based Citizens' Observatory Community for improving quality of life in cities	FP7-ENVIRONMENT	2012-2016	http://www.citi-sense.eu/	CORDIS
CitiCAP LAHTI	citizens' cap and trade co-created	Urban Innovative Actions	2018-2020	https://www.smartlahti.fi/citicap/	social media
Cities4People	People oriented transport & mobility	H2020	unknown	https://cities4people.eu/about/our-conceptual-foundations/	other (add to comment)
CITISPYCE	Combating inequalities through innovative social practices of, and for, young people in cities across Europe	FP7-SSH	2013-2015	http://www.citispyce.eu/	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
City of the Future Dresden	City of the Future Dresden (Zukunftsstadt Dresden)	German Federal Ministry of Education and Research	2015-2020	https://www.ioer.de/zukunftsstadt/	social media
City-HUB	City-HUB	FP7-TRANSPORT	2012-2015	https://cordis.europa.eu/project/rcn/04630/factsheet/en	CORDIS
Citymaker	Citymaker- National Urban Development Policy	Other		https://www.nationale-stadtentwicklungspolitik.de/NSP/DE/Projekte/Projektaufruf/ProjektaufrufGemeinsamGestalten/projektaufruf_node.html	social media
CITYNETMOBIL	CITY NETwork for fair MOBILity	FP7-TRANSPORT	2008-2011	https://cordis.europa.eu/project/rcn/89880/reporting/en	CORDIS
CLARITY	Integrated Climate Adaptation Service Tools for Improving Resilience	H2020-EU.3.5.1.	2017-2020	clarity-h2020.eu AND https://cordis.europa.eu/project/rcn/210518/factsheet/de	social media
CLEVER Cities	Co-designing Locally tailored Ecological solutions for Value added, socially inclusivE Regeneration in Cities	H2020	2018-2023	https://cordis.europa.eu/project/rcn/216078/factsheet/en and http://clevercities.eu/the-project/	other (add to comment)
CLIC	Circular models Leveraging Investments in Cultural heritage adaptive reuse	H2020-EU.3.5.6.	2017-2020	https://cordis.europa.eu/project/rcn/212930/factsheet/en and https://www.clicproject.eu/about/	other (add to comment)
CLIMSAVE	Climate change integrated assessment methodology for cross-sectoral adaptation and vulnerability in Europe	FP7-ENVIRONMENT	2010-2013	http://www.climsave.eu/climsave/index.html	CORDIS
CO-CREATION	The Cohesive City: Addressing Stigmatisation in Disadvantaged Urban Neighbourhoods	H2020	2017-2020	https://www.co-creation-network.org/the-project/objectives/	other (add to comment)
CO2SOLSTOCK	Biobased geological CO2 storage	FP7-ENERGY	2009-2012	https://cordis.europa.eu/project/rcn/90856/reporting/en	CORDIS
COBACORE	Community Based Comprehensive Recovery	FP7-SECURITY	2013-2016	http://www.cobacore.eu/vde/	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
COBRA	Local solutions for future challenges: Community Owned Best practice for sustainable Resource Adaptive management in the Guiana Shield, South America	FP7-ENVIRONMENT	2011-2015	https://cordis.europa.eu/project/rcn/99824/factsheet/en	CORDIS
COBWEB	Citizen Observatory Web	FP7-ENVIRONMENT	2012-2016	https://cobwebproject.eu/	CORDIS
COEURE	Cooperation for European Research in Economics	FP7-SSH	2013-2016	http://www.coeure.eu/	CORDIS
COHSMO	Inequality, urbanization and Territorial Cohesion: Developing the European Social Model of economic growth and democratic capacity	H2020-EU.3.6.1.2. and H2020-EU.3.6.1.4.	2017-2021	https://www.cohsmo.aau.dk/	CORDIS
COMPLEX	Knowledge Based Climate Mitigation Systems for a Low Carbon Economy	FP7-ENVIRONMENT	2012-2016	http://owsgip.itc.utwente.nl/projects/complex/	CORDIS
CONVERGE	Rethinking Globalisation in the light of Contraction and CONVERGEance	FP7-ENVIRONMENT	2009-2013	https://www.schumacherinstitute.org.uk/research/converge/	CORDIS
CORFU	Collaborative research on flood resilience in urban areas	FP7-ENVIRONMENT	2010-2014	http://www.corfu7.eu/	CORDIS
CRE8TV.EU	Creativity for Innvation & Growth in Europe	FP7-SSH	2013-2016	https://cordis.europa.eu/project/rcn/106719/reporting/en	CORDIS
CREDITS4HEALTH	credits-based, people-centric approach for the adoption of healthy life-styles and balanced Mediterranean diet in the frame of social participation and innovation for health promotion	FP7-HEALTH	2013-2016	https://cordis.europa.eu/project/rcn/109922/reporting/en	CORDIS
CRISP	CReating Innovative Sustainability Pathways	FP7-ENVIRONMENT	2011-2014	https://cordis.europa.eu/project/rcn/98684/factsheet/en	CORDIS
CROWD_USG	Crowdsourcing Urban Sustainability Governance. Exploring innovative governance models for addressing urban sustainability through ICT-people interaction	H2020-EU.1.3.2.	2017-2019	https://cordis.europa.eu/project/rcn/209171/factsheet/en	CORDIS
CSEYHP	Combating social exclusion among young homeless populations: a comparative investigation of homeless paths and reinsertion programmes for young men and women of different ethnic and migrant statuses	FP7-SSH	2008-2011	https://cordis.europa.eu/project/rcn/88909/reporting/en	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
CSEYP	Combating social exclusion among young homeless populations: a comparative investigation of homeless paths and reinsertion programmes for young men and women of different ethnic and migrant statuses	FP7-SSH	2008-2011	https://cordis.europa.eu/project/rcn/88909/reporting/en	CORDIS
CUPESSSE	Cultural Pathways to Economic Self-Sufficiency and Entrepreneurship: Family Values and Youth Unemployment in Europe	FP7-SSH	2014-2018	http://cupesse.eu/	CORDIS
CYBERMOVE	Cybernetic transportation systems for the cities of tomorrow	FP5-EESD	2001-2004	https://cordis.europa.eu/project/rcn/59913/factsheet/fr	CORDIS
DEMETRIQ	Developing methodologies to reduce inequalities in the determinants of health	FP7-HEALTH	2012-2014	https://cordis.europa.eu/project/rcn/02459/reporting/en	CORDIS
DESAFIO	Democratization of water and sanitation governance by means of socio-technical innovation	FP7-SSH	2013-2015	https://cordis.europa.eu/project/rcn/06722/reporting/en	CORDIS
DESAFIO	Democratisation of Water and Sanitation Governance by Means of Socio-Technical Innovation	FP7-SSH	2013-2015	https://cordis.europa.eu/project/rcn/06722/reporting/en	CORDIS
DESAPEGUE-SE	Feira de trocas sustentabilidade do Grajaú (sustainable exchange fair)	Partly funded through spin-off of a previous Erasmus+ project LASIN (Latin American Social Innovation Framework)	unknown	https://web.facebook.com/Anitcha.rj/ AND https://oglobo.globo.com/rio/bairros/feira-desapegue-se-completa-cinco-anos-de-trocas-no-grajau-8964057	social media
DESIGN4ENERGY	Building life-cycle evolutionary Design methodology able to create Energy-efficient Buildings flexibly connected with the neighborhood energy system	FP7-NMP	2013-2017	http://www.design4energy.eu/	CORDIS
DIAMOND	Advanced data management and informatics for the optimum operation and control of wastewater treatment plants	FP7-SME	2012-2014	http://www.diamond-eu.org/	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
DIFFER	Diagonal Interventions to Fast-Forward Enhanced Reproductive Health Towards sustainable modes of urban and peri-urban food provisioning	FP7-HEALTH	2011-2016	https://cordis.europa.eu/project/rcn/00516/reporting/en	CORDIS
DIVERCITIES	Governing Urban Diversity: Creating Social Cohesion, Social Mobility and Economic Performance in Today's Hyper-diversified Cities	FP7-SSH	2013-2017	https://www.urbandivercities.eu/	CORDIS
DRIVERS	Addressing the strategic Determinants to Reduce health Inequality Via 1) Early childhood development, 2) Realising fair employment, and 3) Social protection	FP7-HEALTH	2012-2015	https://cordis.europa.eu/project/rcn/01791/reporting/en	CORDIS
DYNAMIX	DYNAMIC policy MIXes for absolute decoupling of environmental impact of EU resource use from economic growth	FP7-ENVIRONMENT	2012-2016	https://cordis.europa.eu/project/rcn/04264/reporting/en	CORDIS
EBSF	European Bus System of the Future	FP7-TRANSPORT	2008-2013	https://cordis.europa.eu/project/rcn/89933/reporting/en	CORDIS
ECODISTR-ICT	Integrated decision support tool for retrofit and renewal towards sustainable districts	FP7-ENVIRONMENT	2013-2016	https://cordis.europa.eu/project/rcn/10674/reporting/en	CORDIS
ECONADAPT	Economics of climate change adaptation in Europe	FP7-ENVIRONMENT	2013-2016	https://cordis.europa.eu/project/rcn/10394/reporting/en	CORDIS
EcoWater	Meso-level eco-efficiency indicators to assess technologies and their uptake in water use sectors	FP7-ENVIRONMENT	2011-2014	http://environ.chemeng.ntua.gr/ecowater/	CORDIS
EdiCitNet	Edible Cities Network - Integrating Edible City Solutions for social resilient and sustainably productive cities	H2020	2018-2023	https://cordis.europa.eu/project/rcn/216082/factsheet/en	social media
EDUMIGROM	Ethnic Differences in Education and Diverging Prospects for Urban Youth in an Enlarged Europe	FP7-SSH	2008-2011	https://cordis.europa.eu/project/rcn/87809/brief/en	CORDIS
EDUWEL	Education as Welfare - Enhancing opportunities for socially vulnerable youth in Europe	FP7-PEOPLE	2010-2014	https://cordis.europa.eu/project/rcn/93095/reporting/en	CORDIS
EFESEIIS	Enabling the flourishing and evolution of social entrepreneurship for innovative and inclusive societies	FP7-SSH	2013-2016	https://cordis.europa.eu/project/rcn/11161/reporting/en	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
EGERA	Effective Gender Equality in Research and the Academia	FP7-SIS	2014-2017	https://cordis.europa.eu/project/rcn/11470/reporting/en	CORDIS
EJOLT	Environmental Justice Organizations, Liabilities and Trade	FP7-SIS	2011-2015	http://www.ejolt.org/	CORDIS
ELITE	ELICIT TO LEARN CRUCIAL POST-CRISIS LESSONS	FP7-SECURITY	2013-2014	http://www.elite-eu.org/	CORDIS
EMUVE	Euro-Mediterranean Urban Voids Ecology	FP7-PEOPLE	2013-2015	https://cordis.europa.eu/project/rcn/07112/factsheet/en	CORDIS
EN-SUGI	Eranet Sustainable Urbanisation Global Initiative	H2020 (various)	2016-2021	https://jpi-urbaneurope.eu/calls/sugi/	other (add to comment)
ENCI-LOWCARB	European network engaging civil society in low carbon scenarios	FP7-ENVIRONMENT	2009-2012	https://cordis.europa.eu/project/rcn/88647/reporting/en	CORDIS
END-O-SLUDG	Marketable sludge derivatives from sustainable processing of wastewater in a highly integrated treatment plant	FP7-ENVIRONMENT	2011-2013	https://cordis.europa.eu/project/rcn/97820/factsheet/en	CORDIS
ENERGISE	European Network for Research, Good Practice and Innovation for Sustainable Energy	H2020-EU.3.3.6.	2016-2019	https://cordis.europa.eu/project/rcn/205823/factsheet/en	social media
ENGOV	Environmental Governance in Latin America and the Caribbean: Developing Frameworks for Sustainable and Equitable Natural Resource Use	FP7-SSH	2011-2015	https://cordis.europa.eu/project/rcn/97211/reporting/en	CORDIS
ENHANCE	Environmental Humanities for a Concerned Europe	H2020-EU.1.3.1.	2015-2019	https://cordis.europa.eu/project/rcn/93967/factsheet/en	CORDIS
ENJINE	Environmental justice and inequality in Europe	FP6-MOBILITY	2006-2008	https://cordis.europa.eu/project/rcn/83049/factsheet/en	CORDIS
ENNAH	European Network on Noise And Health	FP7-ENVIRONMENT	2009-2012	https://cordis.europa.eu/project/rcn/92035/reporting/en	CORDIS
ENTITLE	European Network of Political Ecology	FP7-PEOPLE	2012-2016	https://cordis.europa.eu/project/rcn/01828/factsheet/en	CORDIS
EnvJustice	A GLOBAL MOVEMENT FOR ENVIRONMENTAL JUSTICE: The EJAtlas	H2020-EU.1.1.	2016-2021	https://cordis.europa.eu/project/rcn/206447/factsheet/en	CORDIS
EPI-WATER	Evaluating Economic Policy Instruments for Sustainable Water Management in Europe	FP7-ENVIRONMENT	2011-2013	https://cordis.europa.eu/project/rcn/96702/reporting/en	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
ERA-ENVHEALTH	Coordination of national environment and health research programmes - Environment and health ERA-NET	FP7-ENVIRONMENT	2008-2012	https://cordis.europa.eu/project/rcn/89360/reporting/en	CORDIS
ESDINDS	The Development of Indicators & Assessment Tools for CSO Values-based projects in Education for Sustainable Development (ESD)	FP7-ENVIRONMENT	2009-2011	https://cordis.europa.eu/project/rcn/89639/reporting/en	CORDIS
ESIE	Egalitarian and Socially Inclusive Europe	FP6-MOBILITY	2006-2010	https://cordis.europa.eu/project/rcn/85109/reporting/en	CORDIS
ESMARTCITY	Enabling Smarter City in the MED Area through Networking	Interreg	2018-2020	esmartcity.interreg-med.eu/	social media
EUBERRY	The sustainable improvement of European berry production, quality and nutritional value in a changing environment: Strawberries, Currants, Blackberries, Blueberries and Raspberries	FP7-KBBE	2011-2014	https://www.euberry.univpm.it/	CORDIS
EUBORDERREGIONS	European Regions, EU External Borders and the Immediate Neighbours. Analysing Regional Development Options through Policies and Practices of Cross-Border Co-operation	FP7-SSH	2011-2015	https://cordis.europa.eu/project/rcn/99724/reporting/en	CORDIS
EUBORDERSCAPES	Bordering, Political Landscapes and Social Arenas: Potentials and Challenges of Evolving Border Concepts in a post-Cold War World	FP7-SSH	2012-2016	http://www.euborderscapes.eu	CORDIS
EUGENMED	European Gender Medicine Network	FP7-HEALTH	2013-2015	https://cordis.europa.eu/project/rcn/09456/reporting/en	CORDIS
EUMARGINS	Towards the inclusion of young adult immigrants	FP7-SSH	2008-2011	https://cordis.europa.eu/project/rcn/87809/brief/en	CORDIS
EUNAM	EU and North African Migrants: Health and Health Systems	FP7-HEALTH	2011-2015	https://www.dkfz.de/en/molgen_epi/demiology/EUNAM/EUNAM.html	CORDIS
EURO-FESTIVAL	arts festival and the european public culture	FP7-SSH	2008-2010	https://cordis.europa.eu/project/rcn/88564/reporting/en	CORDIS
EUROFORUM	European Research Forum for Urban Mobility		2006-2007	https://cordis.europa.eu/news/rcn/27248/en AND https://hal.archives-ouvertes.fr/hal-00575525/document	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
EWEBE	Multifaceted approach to measuring societal wellbeing	FP7-PEOPLE	2012-2015	https://cordis.europa.eu/project/rcn/99915/brief/en	CORDIS
FACIT	Faith-Based Organisations and Exclusion in European Cities	FP7-SSH	2008-2010	https://cordis.europa.eu/project/rcn/87790/reporting/en	CORDIS
FAMILIESANDSOCIETIES	Changing families and sustainable societies: Policy contexts and diversity over the life course and across generations	FP7-SSH	2013-2017	http://www.familiesandsocieties.eu/	CORDIS
FARMPATH	Farming Transitions: Pathways Towards Regional Sustainability of Agriculture in Europe	FP7-KBBE	2011-2014	https://cordis.europa.eu/project/rcn/99423/reporting/en	CORDIS
FERTIPLUS	FERTIPLUS Reducing mineral fertilisers and agro-chemicals by recycling treated organic waste as compost and bio-char products	FP7-KBBE	2011-2015	http://www.fertiplus.eu/Fertiplus/	CORDIS
FESSUD	Financialisation, economy, society and sustainable development	FP7-SSH	2011-2016	http://fessud.eu/	CORDIS
FINEST Twins	Building a multidisciplinary Smart City Centre of Excellence (CoE) in Tallinn	Horizon 2020	2019-2026	https://forumvirium.fi/en/finest-smart-city/	social media
FINMAP	Financial Distortions and Macroeconomic Performance: Expectations, Constraints and Interaction of Agents	FP7-SSH	2014-2016	https://cordis.europa.eu/project/rcn/11392/reporting/en	CORDIS
FINNOV	Finance, innovation and growth: changing patterns and policy implications	FP7-SSH	2009-2012	https://cordis.europa.eu/project/rcn/91232/reporting/en	CORDIS
FLAGSHIP	Forward Looking Analysis of Grand Societal Challenges and Innovative Policies	FP7-SSH	2013-2015	https://cordis.europa.eu/project/rcn/108144/reporting/en	CORDIS
FLOODPROBE	Technologies for the cost-effective Flood Protection of the Built Environment	FP7-ENVIRONMENT	2009-2013	http://www.floodprobe.eu/	CORDIS
FLAWS	Impact of local welfare systems on female labour force participation and social cohesion	FP7-SSH	2011-2014	http://www.flaws-eu.eu/home/	CORDIS
FOCUS-BALKANS	Food Consumer Science in the Balkans: Frameworks, Protocols and Networks for a better knowledge of food behaviours	FP7-KBBE	2008-2011	https://www.focus-balkans.org/	CORDIS
FOODCONFERENCE	Food and nutrition in the 21st century	FP7-KBBE	2011-2012	https://cordis.europa.eu/project/rcn/99177/factsheet/en	CORDIS

Acronym	Full name of project	Funding scheme	Time frame	Link	Mapping source(s)
FOODLINKS	Knowledge brokerage to promote sustainable food consumption and production: linking scientists, policymakers and civil society organisations	FP7-ENVIRONMENT	2011-2013	https://cordis.europa.eu/project/rcn/97103/reporting/en	CORDIS
FOODMETRES	Food Planning and Innovation for Sustainable Metropolitan Regions	FP7-KBBE	2012-2015	http://www.foodmetres.eu/	other (add to comment)
FOODSECURE	Exploring the Future of Global Food and Nutrition Security	FP7-SSH	2012-2017	https://www.foodsecure.eu/	CORDIS
Fossil Fuel Divestment	Fossil Fuel Divestment	non-profit organization registered in the United States	- now	https://qofossilfree.org/divestment/what-is-fossil-fuel-divestment/	social media
FRAME	Fostering Human Rights Among European (external and internal) Policies	FP7-SSH	2013-2017	https://cordis.europa.eu/project/rcn/08540/reporting/en	CORDIS
FUTURAGE	FUTURAGE: a roadmap for aging research	FP7-HEALTH	2009-2011	https://cordis.europa.eu/project/rcn/92038/reporting/en	CORDIS
GE.M.IC.	Gender, Migration and Intercultural Interactions in the Mediterranean and South East Europe: an interdisciplinary perspective	FP7-SSH	2008-2011	https://cordis.europa.eu/project/rcn/88610/reporting/en	CORDIS

Part B: Long-list of projects, column 1, 7-12

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
(none)	Scenario-building (showing the social consequences of alternative forms of transport in its city to stimulate informed public debate)	Among the project's main goals is the contribution to an understanding of what is involved in creating a 'sustainable society' and reducing 'car dependency', through a focus on how it moves towards social sustainability impact on social structure. The particular focus of this project is transport and the issue of sustainable mobility. Moreover the project seeks to ascertain how such 'buried' technologies (specific transport technologies, that become buried in social structures) distribute environmental risks, consumption costs, and mobility and employment benefits unequally across different social groups.	to a great extent	somewhat	somewhat	Sociology/Employment research
3iBS	bus, public transport	The 3iBS project is founded on the consideration that buses still remain the most universal solution for a sustainable urban development, effectively taking into account the economic, environmental and social perspectives. Challenge is to give a new identity to urban and suburban bus systems.	to a great extent	somewhat	to a great extent	mobility, bus, public transport
A Lab Vertical Farm	best practice / Stakeholder involvement	A Lab Vertical Farm: it involves using LED lighting and water-pump technology to allow for the growing of crops and plants in indoor spaces.	to a great extent	not at all	somewhat	Agriculture / Food
ACCEPT PLURALISM	Tolerance, diversity (religious, ethnic, other), integration of migrant and native minorities.	Through the lens of the concept of tolerance and the practice of toleration, ACCEPT PLURALISM has explored a set of contemporary diversity challenges mainly in the fields of education and politics in 15 European countries. Results suggest that Muslims and the Roma acquire a renewed significance in the post-1989 period in Europe.	very little	to a great extent	somewhat	social sciences
ACCESS 2 ALL	Public transportation, accessibility					

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
ACT	energy efficient water treatment	The ACT aeration system utilises less energy than any known aeration technology. ACT's technology utilises new methods based on hydrodynamic supercavitation to efficiently mix gas (air containing oxygen) and liquid (treated wastewater). This new technology is versatile and can be adapted to meet the aeration needs of almost any type of WWTP. ACT has established a process which uses the potential energy of a liquid flow to induce a vaporous cavity (super cavity), to aspirate atmospheric air and efficiently mix it with treated wastewater. ACT aeration devices (aerators) are arranged in the manner which allows for several aerators to operate under a single simple pump. Additionally, due to the nature of the hydrodynamic process there is little equipment depreciation because the imploding vapours bubbles do not have direct contact with the solid surface of the equipment. ACT's aeration process does not require air blowers/compressors, air distribution piping, diffusers installation construction and pipes, which dramatically reduces the cost of an aeration system by a factor of 3-5 times.	somewhat	not at all	very little	private company developing tech
ACT	Communities of Practice, Practice Toolkit, Online hub,	ACT will enable better access, sharing, and improvement of gender equality knowledge by advancing Communities of Practice (CoP) as agents for implementing gender equality actions among RPOs and RFOs in ERA, including integration of the gender dimension into research content and process.	very little	to a great extent	not at all	Gender studies, Science studies
ADDRESS	Active Demand in Energy power systems, AD interface (Energy Box - EBox), smart grid technologies	The aim of project is to develop a comprehensive technical and commercial architecture to enable AD at small commercial and domestic consumers, and to exploit the benefits of AD, with supporting activities	somewhat	somewhat	somewhat	Engineering, economics

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
ADFC	Organising demos, cycling nights and tours, informing the public	The ADFC Dresden is an association that represents the interests of everyday cyclists, promotes more bicycle traffic in the city, fights for equal rights between cyclists and other road-users and supports people who want to 'become cyclists'.	somewhat	somewhat	to a great extent	not applicable
AEOLUS4FUTURE						
AGAPE	Anti-gentrification practices toolkit	The project examined the relevance of gentrification resistance theory in understanding the emergence of anti-eviction, anti-speculative and anti-privatisation practices in SECs during the post-2008 economic crisis. They researched and contextualised different types of displacement within the political and institutional regulatory landscape and housing systems of SECs. In addition, to strengthen knowledge on preventing displacement, the AGAPE team investigated anti-gentrification practices.	somewhat	to a great extent	to a great extent	Human / Political Geography
ALICE RAP	Governance practices, stakeholder participation, social and health impacts		not at all	somewhat	somewhat	multidisciplinary; public health
ALLIANCE						

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
ALTERNATIVE	Restorative justice in the context of intercultural conflict	The idea for the project arose in the light of the awareness of the limitations of research in the field of restorative justice (RJ) and at the same time its potential application in the field of security. The project, by the use of action research methodology, assembles knowledge about RJ interactions starting from a few selected security sensitive areas. We focus on the intercultural context, because of the current relevance of the intercultural context to security matters and threats in Europe. Understanding the significance and impact of cultural difference is especially important for analysts or practitioners of conflict resolution who work in intercultural contexts, since culture affects many of the communicational or interlocutory processes that lie at the heart of most conflict resolution techniques. The project studies both the phenomenon of conflict (its nature, characteristics, evolution, definitions, understandings) and conflict intervention in intercultural contexts, as seen from the framework of restorative justice, and provide alternative understandings of both. Levels of conflicts in an intercultural context dealt with are: Micro-level: personal and interpersonal, Meso-level: local community, village, neighbourhood, school, etc., Macro-level: whole society, or between bigger (ethnic) groups or nations or religious groups	not at all	to a great extent	somewhat	security studies

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
APRAISE	A method/approach for improving the design and evaluation of environmental policies (APRAISE 3E method) // some of the types of interventions examined include: recycling plastic packaging, sustainable energy buildings, and biofuels for transport.	The overarching motivation of APRAISE is to contribute to research on and application of sustainability-oriented policy making by building a more comprehensive understanding of the policy systems at a sectoral, national, and pan-European level. APRAISE explains why a policy may perform differently from expected and draws the relevant conclusions to improve future initiatives in similar areas, interrogating mainly questions of: efficacy, effectiveness, and efficiency.	to a great extent	not at all	somewhat	policy studies
ARABTRANS			not at all	to a great extent	not at all	
ARTS	Acceleration Roadmaps, Transition to Sustainability	The research in the ARTS project responds to two societal challenges: First, it supports governance in city-regions by revealing how transition initiatives source, mobilize and instrumentalise resources to realise and scale sustainable solutions. Second, it contributes to the understanding of transformative and societal governance processes that play out in making European city-regions more sustainable and socially inclusive through the scaling of transition initiatives.	to a great extent	somewhat	to a great extent	Governance and policy studies, Resilience and Transition studies, multi-disciplinary questions and approach
ASPA	Research into ageing	Research into ageing and its impacts on European labour is producing knowledge that can help employers and policymakers better use the potential of the elderly in the workforce.	somewhat	somewhat	very little	ageing, labour

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
Atlantic Social Lab	Social innovation	aims to develop and promote social innovation approaches and methods to give response to key growing social issues of the Atlantic Area, both within citizens, third sector and social enterprises as well as the public sector.	somewhat	somewhat	somewhat	Transnational approach to Social innovation
BASE	Climate change adaptation, the adaptation gap, context-specific strategies	The BASE project aims to foster sustainable adaptation in Europe by improving the knowledge base on adaptation and making this information easier to access, understand and act upon. 23 European case studies, as "inspirations" for adaptation.	to a great extent	very little	somewhat	Multi-disciplinary
BBM	Innovative 'guerilla' charity	Budapest Bike Maffia (BBM) is one of the most rapidly growing civil society organisations in Hungary, which was established by young bicycle riders at Christmas in 2011. The organisation consists of civilians, who are doing volunteer works in an innovative way to assist people in need. The basis of the programme is fund raising and the distribution of donations. The implementation is characterised by modernity, it is the combination of social work, volunteering, charity and cycling. Budapest Bike Maffia (BBM) is the most innovative civil society organisation in Hungary. Thanks to their modern mentality they operate twelve projects, focusing on helping the homeless and families in need. They started with a bicycle-riding group, but now their charity network consists of more than one hundred people. On a yearly basis, they distribute more than a hundred thousand portions of food to people in need. In addition, thanks to their sensitization activities they can reach thousands of young and elderly people. The Bike Maffia is a new philosophy according to some people, but it is safe to say that at least they inject continuous innovation into acts of	very little	to a great extent	to a great extent	not applicable

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
BEACON	Policy-making/ creating awareness (about climate change)	Bridging European and Local Climate Action (BEACON) is a project promoting climate action and facilitating an exchange between national governments as well as municipalities and schools in Europe. The aim of the project is to strengthen bi- and multilateral cooperation and create common ambition to realise the Paris Agreement.	to a great extent	very little	somewhat	climate policy
Bellidea	Stakeholder involvement / Smart technology	How to stimulate citizens to use less cars but the public transport system? The App Bellidea is a smart technology solution. You collect points in using the bike, public transport or walk => For these point you get a premium.	to a great extent	not at all	to a great extent	Mobility / smart technology
BESSE	knowledge brokerage, sustainable sanitation,	The project aimed at bridging the gap between science, policymaking and implementation, and to promote inter- and trans-disciplinary approaches involving social and natural sciences., towards environmentally sustainable sanitation.	to a great extent	very little	very little	Environmental engineering, social science
BEUCITIZEN	European citizens rights and impediments	Comparative overview and classification of the various barriers to the exercise of the rights and obligations of EU citizens. The project distinguishes citizenship rights according to type (economic, social, political and civil; the horizontal dimension	very little	somewhat	very little	Citizen rights, inclusion, education
BEWATER	Fuzzy Cognitive Mapping, sustainable water management / Adaptation Plans for 4 river basins	The BeWater project promotes dialogue and collaboration between science and society for sustainable water management and adaptation to the impacts of global change in the Mediterranean. BeWater uses an iterative process of mutual learning, participatory techniques and a bottom-up approach to ensure that stakeholders play an active role in determining appropriate strategies for management of river basins.	to a great extent	very little	not at all	Water experts and ecologists, environmental consultancies, policy experts and some business

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
BIOMAN	biogas production	The objective of the BIOMAN project was to promote more sustainable as well as economically feasible biogas production from low value substrates such as manure and 2nd generation biomasses. To achieve this, BIOMAN was based on the assumption that more biogas can be retrieved from the fibre fraction of manure by specifically treating the fibre fraction. A concept termed the "Re-Injection Loop" was formulated; consisting of a solid separation of the digested fibre fraction followed by a series of enzymatic and physical treatments on the digested fibre fraction alone following a reinjection into the anaerobic digester.	somewhat	very little	very little	biotechnology
BIOWALK4BIO FUELS						

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
BRAINPOOL	alternative economic indicators (beyond GDP), e.g. human development index, ecological footprint; knowledge brokerage	Economic growth, on its own, cannot deliver what society now wants: sustainability, social justice and improved well-being. Institutions such as Eurostat, the OECD, the World Bank, National Statistical Offices (NSOs) and others, are responding to the desire from governments and civil society to consider a more nuanced set of economic policy objectives, that is broader than maximising Gross Domestic Product (GDP) and market efficiency. The BRAINPOOL project's activities have been directed at making sense of the array of actors, aims, indicators and initiatives that have emerged from these efforts with a focus on exploring the barriers to the use of Beyond GDP indicators in policy making and how these can be overcome. Beyond GDP indicators are defined as: "those indicators and indicator sets that have been proposed as necessary and central to the measurement of societal progress in a broad sense, other than those indicators, such as GDP or the unemployment rate, that are already playing this role." In terms of their use in policy we do not simply mean their use in parallel with traditional economic indicators but as part of an integrated policy process that also informs a more holistic approach to economic policy making. The BRAINPOOL project explored the question of why some indicators manage to achieve success while others fall short.	to a great extent	to a great extent	somewhat	policy studies
CAPHAZ-NET	Regional Hazards Workshops, resilience, risk governance, social capacity	CapHaz-Net achieved to outline a strategy and develop specific recommendation framing social capacity building as a long-term process that starts early and should foster mutual and continuous participatory learning processes. Six principles structure this strategy, whereas these principles are based both on insights gained through the extensive literature reviews and from the Regional Hazard Workshops	to a great extent	very little	somewhat	Risk studies, social studies

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
CASCADE						
CCSC	Urban development, Urban Labs, Culture, mapping	a consortium of ten organisations led by Trans Europe Halles, the European network of non-governmental cultural centres. 37 organisations in 21 European countries are part of the Urban Labs. Mapping Europes cultural spaces	somewhat	somewhat	to a great extent	Mapping, Urban development, Urban Labs, Culture, Urban Regeneration
CD-LINKS	Climate-development policies	The CD-LINKS project is exploring the complex interplay between climate action and development, while simultaneously taking both global and national perspectives and thereby informing the design of complementary climate-development policies.	to a great extent	to a great extent	somewhat	Empirical analysis, model enhancement and scenario development
CEECEC	CEECEC (Civil Society Engagement with ECological EConomics) + Civil Society Organisations (CSOs)	New tools and resources in ecological economics (EE) are helping countries in need to overcome conflicts of interest related to the environment, ultimately promoting sustainability. Mostly global examples. Predecessor of EJOLT project.	somewhat	to a great extent	somewhat	Ecological economics, sustainability sciences
CESBA MED	Development of local energy efficiency plans for public buildings (on neighbourhood level)	Energy efficient measures and their implementation at neighbourhood level (i.e. district heating, PV installations, etc) are showing clearly that a building scale approach is not optimal in reaching significant and cost-effective improvements. However at neighbourhood scale, decision making processes and the design of the intervention are more complex. Many EU projects addressed this issue proposing different methodologies, tools and indicators. CESBA MED intends to test 10 of them and to select the most affordable and operational solutions.	to a great extent	very little	somewhat	energy efficiency studies

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
CESINE	ecosystem services, biodiversity offsetting	The aim of the Marie Curie Project CESINE (Conservation and Ecosystem Services in the New biodiversity Economy) was to analyse how biodiversity conservation in the EU is being reconstructed around the measurement of the economic values of nature, using the UK as a case study. The project was specifically designed to address three key research gaps in critical geographical scholarship on nature-society relationships: (a) the limited amount of interdisciplinary research on recent trends in market environmentalism to recognize and describe the values of ecosystems and biodiversity, (b) the fact that the UK's global lead in the application of a market based approach to conservation is under-researched, and (c) the limited amount of critical empirical research in the developed world and especially the EU. By addressing these questions, the CESINE Project has provided a timely and important critical reflection on the changing approaches to the conservation and management of nature in the era following the financial crash of 2008.				

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
CHANCE2SUSTAIN	research into governing urban development -- specifically economic growth, social inequality and vulnerability, and environmental governance	The C2S project was designed to undertake comparative empirical research in 10 cities in four fast-growing countries of the South to understand the role of SKM and participatory processes in facing the challenges in a number of strategic domains of urban development; those of economic growth, social inequality and vulnerability, and environmental governance. This demanded that the research team locate the project and its parts in a range of theoretical frameworks at different levels, namely, the meta framework of the project, described in this paper; the theoretical and methodological frames for each domain; and the theoretical framework for comparative urban. In each city, there were researchers from both the North and South working together in the five domains of economic growth through megaprojects; social mobilisation and social exclusion in sub-standard settlements; environmental governance with the focus on water-related issues; spatial knowledge management; and fiscal decentralisation and participatory city budgeting. The development of theoretical, conceptual and methodological frameworks for the research were developed collaboratively for each domain in order that comparison of the urban processes across the cities could take place. Furthermore, since the main aim of the project is to compare cities in terms of the extent to which they have shifted towards building adaptive capacity for a trajectory towards a more sustainable future, the research project adopted a relational approach to comparing the case study cities, which accepts that the complex territorial histories (re)produce the human geography of places within a	to a great extent	to a great extent	to a great extent	urban studies, human geography
CIPRNET						

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
CITI-SENSE	Citizens' Observatories Web Portal, sensor based tools for participating in environmental governance, citizen scientist	The project aims to learn from citizen experience and perception and enable citizenship co-participation in community decision making and co-operative planning. The concept of CITI-SENSE rests on three pillars: technological platforms for distributed monitoring; information and communication technologies; and societal involvement.	to a great extent	to a great extent	to a great extent	Public Health, participatory science
CitiCAP LAHTI	Digital environment and intelligent design	Lahti has set itself targets of being a carbon neutral and zero waste city, as well as curbing over-consumption, by 2040. Digital environment and intelligent design can create sustainable urban environments where residents can enjoy a high quality of life.	to a great extent	somewhat	to a great extent	smart technology / circular economy
Cities4People	Sharing economy	POTM is a form of transport and mobility that takes the needs and wishes of the people into account with the goal of improving transportation and increasing urban sustainability. Overall, the POTM framework works towards the emergence of open mobility communities that via bottom-up and transparent procedures are able to produce urban mobility innovations that do not feel imposed on either citizens or institutions, but are instead commonly agreed upon. More specifically, POTM is based on the meaningful collaboration of all quadruple helix city stakeholders, which means that local citizens are provided with the opportunity and the means to work together with urban mobility authorities as well as with research and industry stakeholders, with a view to co-develop, prototype and pilot innovative and smart mobility solutions that address pressing and real urban mobility challenges.	to a great extent	to a great extent	somewhat	multidisciplinary

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
CITISPYCE	Action research, Innovative social practices to combat inequalities	The key question at the heart of the CITISPYCE project : "In the rapidly redrawn landscape of deprivation and inequalities across Europe, how might policy makers (at local, national and EU levels) be assisted in their objectives to tackle inequalities through learning from innovative strategies developed for and by young people and particularly those from marginalised groups in major European cities, including an elaboration of the resources and technologies at the heart of these social innovations."	very little	to a great extent	to a great extent	Social sciences
City of the Future Dresden	sustainability transitions	What does the future city of Dresden look like and how can it be realized? The idea of "transition governance" is to develop and test ideas for a sustainable, environmentally friendly urban society through four phases - vision, planning, experimentation and reflection. A central element of "transition governance" is the participation of citizens. As part of the BMBF project "Zukunftsstadt Dresden 2030+" they are to be authorized to develop their own future visions for their city and to test them in self-designed projects in real laboratories. The IÖR accompanies this process scientifically to gain insights into the further development of transition theory and participatory governance approaches.	somewhat	somewhat	to a great extent	Ecological Urban and Regional Development, sustainable development

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
City-HUB	City-hubs, transportation, mobility interchange	Although interchanges are crucial for improving accessibility, there are still problems remaining such as seams or bottlenecks, which are mainly reported in the coordination between the different transport modes and the use of the information systems and management model. In order to examine a part of these problems, the City-HUB consortium of nine European research institutes from nine countries belonging to the European conference of transport research institutes (ECTRI) project studied 27 multimodal interchanges, developing an integrated model and a comprehensive set of methodological guidelines to obtain the maximum efficiency by upgrading existing urban interchanges or by building new ones.	somewhat	not at all	to a great extent	Transportation and technology, civil engineering
Citymaker	Participatory approaches in decision making	Pioneers new models for neighborhood development in four German cities (Altenburg, Hannover, Munster, Nurnberg)	to a great extent	somewhat	to a great extent	Urban planning
CITYNETMOBI L						
CLARITY	Climate Services Information System (CSIS) (co-designed with suppliers, purveyors and end-users to integrate resilience into urban infrastructure)	CLARITY will provide an operational eco-system of cloud based climate services to calculate and present the expected effects of CC-induced and -amplified hazards at the level of risk, vulnerability and impact functions. CLARITY will offer what-If decision support functions to investigate the effects of adaptation measures and risk reduction options in the specific project context, and allow the comparison of alternative strategies. Decision makers involved in these projects will be empowered to perform climate proof and adaptive planning of adaptation and risk reduction options.	to a great extent	very little	to a great extent	multidisciplinary (focus on natural sciences)

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
CLEVER Cities	Nature-based solutions (in cities)/ exchange between cities	Through exchange between cities, inclusive collaboration and multi-disciplinary learning, the CLEVER Cities project aims to drive a new kind of nature-based urban transformation for sustainable and socially inclusive cities across Europe, South America and China.	to a great extent	somewhat	to a great extent	urban development
CLIC	Circular economy principles applied to cultural heritage adaptive reuse (for achieving environmentally, socially, culturally and economically sustainable urban/territorial development)	The CLIC project addresses significant challenges of cultural heritage and landscape adaptive reuse. The trans-disciplinary research project whose overarching goal is to identify evaluation tools to test, implement, validate and share innovative “circular” financing, business and governance models for systemic adaptive reuse of cultural heritage and landscape, demonstrating the economic, social, environmental convenience, in terms of long lasting economic, cultural and environmental wealth. Flexible, transparent and inclusive tools to manage change are required to leverage the potential of cultural heritage for Europe, fostering adaptive reuse of cultural heritage/landscape.	somewhat	somewhat	somewhat	heritage studies
CLIMSAVE						
CO-CREATION	Network and Methodological tool, that of ‘Co-Creation’, that brings together researchers, artists and policy-makers to address stigmatisation with series of events, including a summer school.	The project will take a novel approach to urban socio-spatial segregation and territorial stigmatisation, by creating a structured network for the exchange of knowledge and the joint development of innovative approaches to address a crucial societal challenge of the 21st century, that of the Cohesive City. The research builds on the earlier findings from the ‘banlieue network’, an international research network (banlieuenetwork.org) which was funded by the aHrC (2012-2014) with the aim of designing a series of interdisciplinary events ‘to address the representation, theory and practice of suburban space.	somewhat	to a great extent	to a great extent	various disciplines ranging from architecture and sociology to film, literature and linguistics
CO2SOLSTOCK						

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
COBACORE	community-based comprehensive recovery (from disaster, emergency) as a concept and an online platform	The aim of the project is to enable a faster and more efficient emergency response in the recovery phase of a major disaster by empowering the community to work with emergency response teams to help themselves. The COBACORE platform and methodology matches the needs and capacities of three groups – the Affected Community, Responding Community and Responding Professionals.	somewhat	somewhat	somewhat	Disaster studies, technology studies

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
COBRA	community-led sustainable management of ecosystem services; capacity-building, partnership, indigenous knowledge	Novel funding initiatives are on the cusp of implementation across the developing world. Community owned solutions for the management of ecosystem services have the potential to act as showcases for determining the most effective and efficient use of these emerging funding streams in order to maximise social justice and ecological sustainability. The COBRA project brings together key South American and European CSOs that have extensive experience in enabling and disseminating grassroots solutions to complex problems in the Guiana Shield region of Brazil, Colombia, Venezuela, Guyana, Suriname and French Guiana. The RTDs on the project have scientific expertise to rigorously evaluate these grassroots solutions and determine their impact, while the SME brings with it the business and technical expertise for promoting the financial viability of these initiatives. The CSOs, RTDs and the SME have formed a partnership to help deliver effective community-led sustainable management of ecosystem services and to widely disseminate best practice. We therefore aim to: 1) review the emergence of novel social, economic and environmental challenges facing communities in the Guiana Shield region; 2) engage with established locally owned and developed solutions; 3) analyse and record these solutions in order to investigate their generic transferability; 4) test the approach in a wider range of communities confronting similar challenges; 5) facilitate communication between communities and governments to ensure local needs are addressed and emerging policies benefit local communities; and 6) develop	to a great extent	to a great extent	very little	interdisciplinary and transdisciplinary
COBWEB	Crowdsourcing of environmental data	COBWEB, the Citizen OBservatory WEB, is a project to empower everyday people with the ability to collect environmental information using mobile devices. This collected information will then be suitable for use in research, decision making and policy formation.	to a great extent	somewhat	very little	Conservation studies

COEURE	Multistakeholder analysis of EU economics research	COEURE – COoperation for EUropean Research in Economics – is a cooperative action financed by the European Commission within the Seventh Framework Programme. It is a forum which brings together the key stakeholders in the European economic research space – scientists from the different strands of economic research in Europe, users of economic research in the policy community, economic decision makers, and funders of economic research, and which, by a process of stocktaking, consultation and stakeholder engagement, is aimed to formulate an Agenda for Research Funding for Economics in Europe (ARFEE).	somewhat	somewhat	not at all	economics
COHSMO	Measures to promote socio-economic equity and socio-economic well-being at local and regional level	COHSMO investigates the relation between socioeconomic structures of inequality, urbanization and territorial cohesion, and how territorial cohesion at different European scales affect economic growth, spatial justice and democratic capacities.	to a great extent	to a great extent	to a great extent	Sociology
COMPLEX	Energy technologies, new ways of using landscapes and new policy instruments	The project will develop a suite of modelling tools and decision-support systems and support communities across Europe working to complete the transition to a low-carbon economy by 2050.	to a great extent	somewhat	somewhat	Energy planning / Climate

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
CONVERGE	Contraction and Convergence, linking sustainability and equity concerns	The CONVERGE project will build from the concept of 'contraction and convergence' that informed the Kyoto process. C&C linked the key social concept of equal rights to emissions with the key ecological need for reduced emissions to issue a challenge to economic systems to develop fair processes for emissions reduction. CONVERGE aims to re-think globalisation by developing our understanding of convergence beyond emissions-trading across wider social, economic and ecological dimensions of sustainability. CONVERGE will research, develop and test the processes of contraction, convergence and divergence in current forms of globalisation. The research will be based on systems science to integrate social, scientific and economic disciplines in order to create coherent solutions to complex problems. Key to the success of this study is the interdisciplinary approach and working with stakeholders from civil society, government and business. CONVERGE seeks to explore convergent sustainability relationships across different scales from local, national, global-regional to global. CONVERGE will research current examples of convergence in communities, policies and indicators moving towards sustainability. The project will develop a convergence frame for understanding and development in civil society and policy communities; accessible publications providing guidance and tools for the use of this framework; a set of Convergence indicators, quantitative and qualitative, that will be used to test and model the processes of convergence including development of a Computer Programme: and recommendations to assist policy makers	to a great extent	to a great extent	somewhat	interdisciplinary

CYBERMOVE	cyber cars	<p>Europe leads the development of new transportation systems, based on small-automated vehicles (cyber cars) for people or freight delivery in cities, with door-to-door, on-demand service. The CyberMove Project aims at accelerating the development and implementation of these novel systems, by cooperation of the major European players and participation of several cities throughout Europe. The work on the project will start with analyses of users needs in these cities, for defining and characterising realistic systems that would meet these needs. Several cities will then be selected for real size experiments with vehicles and technologies already available. The transportation systems will be designed, installed and operated in these cities. The cost of the installation of these experiments will be supported by the participating cities. Evaluations of the systems performance will include energy, environment, safety and economic impacts. The dissemination program will focus on the diffusion of the knowledge gained in these experiments to all cities, public acceptance and on exploitation plans for implementation of the new transportation systems.</p> <p>CyberMove is related to the CyberCars Project, which concentrates on the improvements of the cyber technologies for the vehicle and the infrastructure. CyberCars has been approved in the EC IST Programme.</p>	very little	very little	somewhat	mechanics

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
DIVERCITIES	Hyperdiversity as a beneficial feature of cities	The principal aim of DIVERCITIES is to examine how Europe can benefit from diversity. The project's central hypothesis is that urban diversity is an asset. It can inspire creativity and innovation. Create cities that are more liveable and harmonious. Stimulate local and national economies and make European cities more competitive. Urban diversity can be a strength rather than a burden. It can positively affect social cohesion, social mobility and economic performance. But a re-think of public policies and governance models is needed to make more intelligent use of diversity's potential. A European research team, headed by Utrecht University is conducting a comparative study in 13 European cities. Research will also be carried out in Toronto (Canada), one of the world's most diverse cities. Case studies will be examined where diversity was leveraged to achieve social and socio-economic benefits. The role of urban policies and governance arrangements in stimulating social and economic progress will also be critically analysed. Comparative field research, educational programmes, cross-evaluation sessions and an international policy conference are the key components of this four-year project.	not at all	to a great extent	to a great extent	interdisciplinary: urban geography, political science, organisational studies, law, history, urban planning, economics and sociology

ERA-ENVHEALTH	Environmental health	This project identified key strategic topics as priorities for research such as climate change, nanomaterials and indoor air. One of the activities provided a description of the environment and health research landscape in the EU and reflected the diversity of the participating countries, their different cultures and structures for research and administration – and also their similarities. The task entitled “Bridging the Gap between Science and Policy” was designed to better understand the uptake mechanisms of scientific information into policy and the overall communication processes. It also outlined priorities for Environment and Health policy, to support continuous action in the field, help prioritise research and continue the cross-sector collaboration and networks already established. Projects that ERA-ENVHEALTH supports therefore must not only focus on the research areas of interest to the funders and participating researchers, but also take into account public policy agendas and the major trends that influence them. The project has set up a research database, populated according to a common framework for describing projects and their results, as well as current and past research funding allocations. Analysis tools were used so that information can be displayed graphically, for example showing the projects in progress according to distributions across topic areas. A dissemination and communication strategy were drawn up and as a result, in addition to the regular progress reports, leaflets, posters and monthly news briefing notes were produced and distributed. Two transnational research calls were issued: one in March 2008	very little	very little	very little	multidisciplinary

FLAGSHIP	Scenario analysis related to Grand Societal Challenges, including environmental and social/economic	The world is facing critical changes related to economic, social and environmental issues. However, there are high uncertainties on how these Global Societal Challenges will evolve in the future. Based on past and present information, the Forward-Looking Analysis (FLA) tries to shed light on the nature, level, probability and timing of relevant challenges. The information provided by FLA studies helps us to manage a future situation in a more sensible way. It also allows us to assess the time of occurrence of a particular event and prepare us to focus and face the situation more cautiously. These studies are very helpful to analyse the policy scenarios under different circumstances such as discontinuity and uncertainty of the future, in a world with an increasing interdependency between the different challenges and regions. While the FLA is a complex exercise, they are also essential for decision makers in order to reduce the uncertainty and be able to anticipate the future challenges and try to tackle them. The objectives of the FLAGSHIP Project were: 1. Understanding and assessing the state of the art of forward looking methodologies in relation to Grand Societal Challenges (GSC) and developing tools and modelling frameworks beyond state of the art; 2. Applying an enhanced set of forward looking methods and tools to support EU policies, by analysing reference and alternative scenarios of long-term demographic, legal, economic, social and political evolutions of Europe, in a world context, and assessing potential progress in technological and social innovation; 3. Driving change, producing a set of EU-relevant	somewhat	somewhat	somewhat	multidisciplinary

FOODCONFERENCE	agri-food	<p>The agri-food industry is one of the most important sectors of EU economy while proper nutrition is essential for health and well-being of European citizen. It is estimated that almost 80 % of heart disease, strokes and type 2 diabetes, and 40 % of cancers, could be avoided by proper diet. However, both production of healthy food and promotion of healthy nutrition face serious challenges, like global climate changes and its impact on food security and safety, increasing global food demand, food waste, or high incidence of diet-related diseases and bad dietary habits in most of developed countries. European Union recognizes the importance of these challenges and they had been addressed in several research programmes and strategic documents. However, there is still a need for a throughout discussion of all the aspects of food and nutrition research and policy with major players, like representatives of policy makers, consumers, agriculture, industry and science. Thus, the Polish Technology Platform on Food come up with an initiative to organize a conference "Food and Nutrition in 21st Century" within Polish Presidency in the EU. The main objective of the Conference is to review the most important challenges to European agri-food sector as well as the impact of a diet on health and well-being of European population, in the context of the new European policies. The outcome of the discussion should assist the European Commission in identifying the strategic research needs and their coherence with EU policies in areas linked directly or indirectly to food and nutrition.</p>	very little	very little	not at all	agriculture

GLOBAL-IQ	Economic impacts and analysis of key global environmental and social challenges	The climate sciences community has made a considerable work through the IPCC reports to describe the climate challenge faced by humanity. It appears now that the research load will involve more and more the social sciences and humanities communities. But as emphasized before, global changes studies should not confine themselves to climate change as the unique globalization challenge faced by humanity. Social scientists have more generally to assess the consequences of global changes upon our societies as a whole while contributing to policy action both to mitigate the impacts of climate change and identify the most relevant adaptation strategies in the environmental domain. The objective of Global IQ is to provide significant advances in these two directions from the viewpoint of the economist's community. Economics of globalization is a prominent research topic in contemporary economics. Economics of climate change is also an area of intense research since twenty years especially in Europe. The publication of the Stern Review has been the corner stone of these research efforts, bringing to a large audience the conclusion that present action was needed now, the cost of action being much lower than the costs of inaction in terms of adverse impacts of the future climate upon the well being of humanity. However much remains to be done in this research area both to strengthen the reliability of the Stern Review conclusions and to help design the best policy options for present action in the broader perspective of global changes. To contribute to this overall objective we plan research actions in several directions.	to a great extent	to a great extent	somewhat	economics

GlobalGoals	Institutional arrangement and actor networks for SDG implementation at national and international levels	In 2015, the UN adopted 17 'Sustainable Development Goals' as part of a global '2030 Agenda for Sustainable Development'. The ambition expressed in these goals is unprecedented. But can such goal-setting, as a new central approach in global governance, help resolve the pressing challenges of economic development, poverty eradication, social justice and global environmental protection? While the UN and its member states place high hopes on this novel strategy, there is little scientific knowledge on whether such global goals can live up to exceedingly high expectations. Sustainability research has tended to focus on concrete institutions, actors and practices – not on aspirational goals that bring little in terms of normative specificity, stable regime formation or compliance mechanisms. How can 'global governance through goals' nonetheless be effective – and under which conditions? GLOBALGOALS will address this puzzle and break new ground in sustainability and global governance theories. It offers the first and most comprehensive data compilation, network mapping and comparative institutional analysis of the evolution, effectiveness and future prospects of 'global governance through goals' as a central novel steering mechanism in world politics. This 5-year study programme deploys a unique set of cutting-edge methodologies, including social network analysis and online surveys, to assess and explain the steering effects of nine Sustainable Development Goals through a detailed investigation of their institutional arrangements and actor networks, at international and national levels. HOUWEL	household investment and welfare strategies	The HOUWEL research addressed developments in housing and welfare systems across a range of societies where shifting relationships between families and their homes appear to correspond with the broader restructuring of welfare regimes. A particular concern is not just the revival of intensive house price inflation and diminishing affordability, but also the continued reliance of economies and welfare systems on the circulation of homes as commodities and assets. Such practices make both families and the wider economy enormously dependent on housing markets and property wealth accumulation conditions that are non-durable.	very little	to a great extent	to a great extent	Housing and Urban Studies

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
HOWCOME	research into home ownership	HOWCOME has analyzed the complex interplay between changes in the social production of housing by markets, states and families, and wider (non-housing) trends in social and economic inequality. Changes in the social production of housing by markets, states and families have been driven by more or less the same set forces, including a recalibration and retrenchment of post-war de-commodifying housing policies and state interventions. Following marketization tendencies since the 1970s, the 1980s heralded a qualitatively new and more pervasive era of commodification. As a new way of capital accumulation, national housing finance systems became more strongly integrated in the global economy, which in turn became increasingly dependent on the performance of local housing markets. Reflecting trends in the global economy, housing markets became 'financialized' – as both owner-occupied and rental homes became increasingly understood and traded as financial investment products. HOWCOME's aim was to integrate theory and research from different disciplines – sociology, economics, political science, housing studies, and demography – in an effort to unravel social mechanisms exemplary for this intricate interplay between the upswing in inequality and changing housing regimes. Such social mechanisms connect different societal levels: Large-scale social changes are refracted through variegated institutional contexts, and connect to attitudes, beliefs, preferences and agency of households living in these institutional environments, and to the unfoldment of individual life	somewhat	somewhat	to a great extent	sociology, economics, political science, housing studies, and demography

IMAJINE	Spatial justice, territorial cohesion	The core aim of IMAJINE is to formulate new integrative policy mechanisms to enable European, national and regional government agencies to more effectively address territorial inequalities within the European Union, and to imagine a future for European regions in which the distribution of resources is consistent with principles of social and spatial justice. Territorial cohesion is a guiding principle for EU policy, alongside social cohesion and economic cohesion, yet in recent years territorial inequalities within the EU have widened as the post-2008 economic crisis and adoption of austerity policies have had an uneven geographical impact. There is, accordingly, a pressing need to re-appraise the appropriateness and efficacy of existing policy instruments for tackling territorial inequalities, and to consider and develop alternative mechanisms. In order to achieve this aim, IMAJINE will adopt a multi-disciplinary approach that combines qualitative and quantitative data and macro-scale analysis and case study research, involving economists, geographers, political scientists and sociologists.	somewhat	to a great extent	very little	multidisciplinary

INAPRO	aquaponics	The objective of INAPRO is to mobilise industry, member states and stakeholders to promote a new and innovative technical and technological approach right up to an Aquaponic system which allows a nearly emission free sustainable production and contributes remarkably to global food security for the 21st century. Considering that traditional Aquaponic systems, combining aquaculture and hydroponics, have a great potential in saving water and energy and recovering nutrients from wastewater by value chains, the project aims at a real breakthrough for these systems towards commercialization. This will be achieved by a) the model based optimisation of the system concept in respect to water consumption and quality, environmental impact, waste avoidance, CO2 release and nutrient recycling, energy efficiency, management efforts and finally costs and b) the integration of new technologies containing cutting edge approaches such as: 1) innovative one-way water supply for horticulture and water retrieval by condensation, 2) alternative water and energy sources, 3) optimized filter systems, 4) intelligent sensor and management network for an optimized system construction and operation. The viability of INAPRO systems will be proved in concept-based demonstration projects both in rural and in urban areas that offer a potential economic advantage while simultaneously reducing water and carbon footprint. The dissemination activities (to policy, public and end-users) will open new market opportunities and improve market access inside and outside Europe for producers and technology suppliers. <i>These ambitions meet perfectly with the EU strategies under</i>	to a great extent	very little	not at all	private company developing tech

INFARM	verticle farming, urban agriculture	The EU-funded INFARM (The vertical farming revolution, urban Farming as a Service) project reflects a growing desire for highly nutritious locally grown food, which is free of herbicides and pesticides and addresses the lack of accountability in the current food system. "By growing produce directly where people eat and live, we can cut out the lengthy supply chain, significantly reduce food waste, offer nutrient-dense food without any chemical pesticides and improve the environmental 'foodprint' of our plants," says the INFARM's Chief Technical Officer and co-founder, Guy Galonska.The answer lies in vertical farming, which grows food in vertically stacked layers under carefully controlled conditions, using hydroponics and light-emitting diodes (LEDs) that mimic sunlight. INFARM takes the concept a step further by employing its smart modular farming units throughout the city "Rather than asking ourselves how to fix the deficiencies in the current supply chain, we wanted to redesign the entire chain from start to finish; Instead of building large-scale farms outside of the city, optimising on a specific yield, and then distributing the produce, we decided it would be more effective to distribute the farms themselves and farm directly where people live and eat," Galonska explains.	somewhat	somewhat	somewhat	private company developing tech

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
INTREC	social determinants of health	The WHO's Commission on Social Determinants of Health (SDH) argued in 2008 that the dramatic differences in health status that exist between and within countries are intimately linked with degrees of social disadvantage. These differences are unjust and avoidable, and it is the responsibility of governments, researchers, and civil society to work to reduce them. Part of this work requires the production of setting-specific, timely, and relevant evidence on the relationship between social determinants of health and health outcomes, and yet this information is limited, especially in low- and middle-income countries (LMICs). Thus there is a strong need for the development capacity-building activities to enable such research. INTREC has been established with this concern in mind and its dual aims include: Providing SDH-related training for The International Network for the Demographic Evaluation of Populations and Their Health researchers (INDEPTH), thereby allowing the production of evidence on associations between SDH and health outcomes. Enabling the sharing of this information through facilitating links between researchers and decision makers, and by ensuring that research findings are presented to decision makers in an actionable, policy-relevant manner.	not at all	to a great extent	not at all	medicine

Justhood	story telling, digital ethnography, socio-spatial justice	Rapid urbanisation, growing process of globalisation, and the neoliberal hegemony have culminated in the omnipresence of socio-spatial inequalities at the neighbourhood scale regarding racial segregation, deprivation, stigmatisation, and degradation. Many European and North American cities have initiated neighbourhood-oriented urban redevelopment schemes to mitigate the burden of urban injustice. However, there is no integrated framework to evaluate their achievements. To address this lacuna, the project conceptualises the idea of (un)just neighbourhoods from socio-spatial justice perspective and develops an evaluation framework for measuring key qualities of socio-spatial justice at the neighbourhood scale. The project employs a methodological bricolage approach to address its interdisciplinary nature. It first theorises (un)just neighbourhoods from two perspectives— <i>intra-neighbourhood</i> and <i>inter-neighbourhood</i> socio-spatial justice. It then proposes an integrated framework, consisting of a set of principles, indicators, and measures, for evaluating neighbourhood-oriented redevelopment schemes. Focusing on two neighbourhoods of Bayview-Hunters Point (San Francisco) and Fruitvale (Oakland), the research critically reflects on the constructed storytelling around socio-spatial justice imposed by the local authorities. The proposed evaluation framework is applied to the two cases through intensive fieldwork to explore whether and to what extent the implemented redevelopment schemes have enhanced socio-spatial justice or re-produced existing socio-spatial injustice.	not at all	to a great extent	to a great extent	human geography

LIBERATION	Ecological intensification	The LIBERATION project on Linking Farmland Biodiversity to Ecosystem services for effective ecological intensification brought together about 40 scientists over a period of four years (2013-2017). LIBERATION aimed to establish how on-farm management and semi-natural habitats promoting biodiversity contribute to agricultural productivity and farm income in representative agricultural landscapes in Europe through the provision of multiple ecosystem services. Specific aims of LIBERATION were to: (1) identify general relationships between semi-natural habitats, on-farm management and biodiversity; (2) link farmland biodiversity to ecosystem services; (3) examine different strategies to mitigate biodiversity loss and promote ecosystem services, (4) quantify the impact of ecosystem services on crop yield, (5) quantify the socio-economic implications of ecological intensification, (6) evaluate the contribution of ecosystem services at different land-use scenario's and (7) demonstrate our findings and disseminate them to a wide range of stakeholders	somewhat	not at all	not at all	agriculture

Maas4EU	Mobility-as-a-Service	With the projected growth in transport demand, the current modus operandi in transport supply is deemed unsustainable and generates the need for innovative services that could support seamless mobility and a shift from car-ownership to usership. An emerging trend towards this direction is the integration of on-demand modes in conjunction with public transport, leading to the Mobility-as-a-Service (MaaS) concept. MaaS is a user-centric, intelligent mobility distribution model, in which users' needs are met via a single platform and are offered by a service provider, the mobility operator. Although activities in this field are ongoing, at present there are no established frameworks and quantifiable evidence about MaaS costs and benefits, users' needs, as well as its influence on travel patterns and car ownership of various user groups.	somewhat	not at all	somewhat	private company developing tech

MATUROLIFE	fashion for old people	Urban areas are seeing an increasing population of older people and existing approaches to care for them are becoming unsustainable creating a European wide societal challenge. Assistive technology can provide them with security that will enable them to live independently e.g. wearing alarms and tracking devices around the arm or neck to alert carers to falls or their location if they wander. However such technology is often unsightly and stigmatises the user resulting in high abandonment rates. The MATUROLIFE project will integrate creative artists and fashion designers into the research team to facilitate design-driven innovation. The project will build on existing technological advances in materials which have produced a highly innovative selective metallisation process that utilises nanotechnology, electrochemistry and materials science to encapsulate fibres in textiles with metal and thereby provide conductivity and electronic connectivity. In this way, better integration of electronics and sensors into fabrics and textiles will be possible. This will give the fashion designers and artists the tools to produce AT for older people that is not only functional but is more desirable and appealing as well as being lighter and more comfortable.	not at all	not at all	not at all	fashion

MOLOC	New city building approach (focused on quality of life and energy efficiency)	MOLOC raises two main questions: What are the means of action to adapt urban morphologies to the impacts of climate change and energy transition? How to overcome isolated experimentation and build a coherent model of low-carbon city? The project explores the brakes that limit the impact of local policies and actions in their ambitions to change current urban morphologies in the light of sustainable urban development. Six partners, involved in energy transition strategies, will collectively design and test innovative ways of achieving low-carbon cities through a three steps program. Each partner has set up a local stakeholder group to co-design their action plan. Inspired by a bottom-up approach, partners will pay attention to citizens needs, appropriation by local stakeholders within the whole process and a wider dissemination.	to a great extent	very little	to a great extent	energy transition studies

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
MOPACT	Active aging; longevity as a societal asset	MOPACT is a four year project funded by the European Commission under the Seventh Framework Programme to provide the research and practical evidence upon which Europe can begin to make longevity an asset for social and economic development. To achieve this aim MOPACT concentrates the highest possible quality of scientific analyses into the development of innovative policies and approaches that can assist public authorities and other key actors, at all levels in Europe. MOPACT starts from the conviction that Europe requires a new paradigm of ageing if it is to respond successfully to the challenges of demographic change. Ageing is currently understood as a time of decline, frailty and dependence and policy responses to it still reflect the historical era when retirement took place for a majority at state pension ages and post-retirement years were relatively short. Changes in the labour market and social behaviour coupled with a remarkable extension in longevity have transformed the experience of later life. The boundaries of frailty are being pushed back and, for a growing number of older Europeans, 70 is the new 50. A multi-disciplinary team will target the key challenges of ageing: the continuing longevity revolution; a shrinking and ageing labour force; the fiscal sustainability of pensions, welfare systems and health care; the structural lag between changes in society and subsequent changes in societal institutions and attitudes; the rising need for long-term care; changing social and political roles.	very little	somewhat	very little	multidisciplinary

Nordwärts	Urban planning, smart district, governance	"Nordenwärts" is a generational project that focuses on the strengths of the northern districts of Dortmund and brings to light unsuspected treasures.	somewhat	somewhat	to a great extent	Social Innovation, citizen engagement, eco-system governance

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
NV2G	multiple -- it was a massive research project	The Centre on Innovation and Energy Demand (CIED) sits at the forefront of research on the transition to a low carbon economy. We investigate new technologies and new ways of doing things that have the potential to transform the way we use energy and achieve substantial reductions in energy demand. Our approach moves beyond an exclusive focus on technology and energy supply. We examine how new, low-energy innovations emerge and spread and how this process is shaped by market forces, government policy, social interactions and cultural norms. The innovations CIED examines include new technologies, new energy systems, novel business models and behaviours and combinations of all of these.	to a great extent	very little	somewhat	economics, history, innovation studies, sociology, urban geography
OASIS - School yards	Nature Based Solution (cool islands)	Transforming Paris schoolyards as an opportunity to provide answers to climate and social challenges.	to a great extent	very little	to a great extent	does not apply
OpenHeritage	Organizing, Promoting and ENabling HEritage Re-use through Inclusion, Technology, Access, Governance and Empowerment	Aims at developing and testing an inclusive governance model and a supporting toolbox for the adaptive re-use of cultural heritage assets. It builds on the role of communities and the possibility of empowering them in the redevelopment process based on the concepts of heritage community and participatory culture> incorporation of a coalition of stakeholders into the re-use and maintenance process. sixteen Observatory Cases situated in a variety of urban, peri-urban, and natural environments.	somewhat	somewhat	to a great extent	Inclusive governance, heritage asset management, Local Economy
OpenNESS	Natural Capital and Ecosystem Services	OpenNESS aims to translate the concepts of Natural Capital (NC) and Ecosystem Services (ES) into operational frameworks that provide tested, practical and tailored solutions for integrating ES into land, water and urban management and decision-making.	to a great extent	very little	somewhat	Ecosystem Services / land, water and urban management

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
OPERAS	ecosystem services and city engagement	OPERAs was a five year European research project running from 2012-2017 that aimed to put cutting edge ecosystem science into practice. Researchers and practioners from 27 different organisations helped stakeholders to apply the ecosystem services and natural capital concept into practice.	to a great extent	somewhat	not at all	ecosystem science
OPTICITIES	Intelligent Transport Systems (ITS) solutions to foster efficient and sustainable urban mobility	OPTICITIES' vision is to help European cities tackle complex mobility challenges. OPTICITIES' strategy focuses on the optimisation of transport networks through the development of public/private partnerships and the experimentation of innovative ITS services. Oriented around the following challenges: accessibility of cities (from a logistical, not justice perspective), quality of life in urban centres, environmental impact, urban freight coordination, and public space management. Expected impacts: 6% modal shift inducing a yearly gain of 1.5 MT of CO2; Increase in market size (211 M€ per year) thanks to the new governance scheme and implementation of innovative services; 10% decrease in private car use generating a gain of 3.6 M m2 of public space.	to a great extent	very little	to a great extent	Transportation geography, Information technology
OPTIMISM	Policies and modelling supporting sustainable mobility	OPTIMISM project will propose a set of strategies, recommendations and policy measures, through the scientific analysis of social behaviour, mobility patterns and business models, for integrating and optimising transport system with low-carbon modalities as a goal.	somewhat	somewhat	to a great extent	Transportation geography, information technology
Our Common Dignity	workshop	Heritage and Rights training course and open seminars: Cooperation between state, community and individual in the governance and management of heritage	somewhat	to a great extent	somewhat	Human Rights/ Heritage

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
P-CAN	engagement, impact, co-creation, sharing of knowledge	The Place-Based Climate Action Network (P-CAN) seeks to strengthen the links between national and international climate policy and local delivery through place-based climate action. The Network is innovative in its focus on local decision making. Clear policy signals by the government are essential, but the key to continued climate action increasingly lies at the local level, with the participation of local actors, businesses and citizens. Important decisions about low-carbon business opportunities, renewable energy investment, urban transport, energy management, buildings efficiency and the management of climate risks are decentralised and taken across the UK.	to a great extent	somewhat	to a great extent	economics, human geography
PACT	post carbon transition, envisioning post-carbon futures	The PACT project did shape what a sustainable post-carbon society would look like and how we could reach it within the next 50 years. It focused first on what shape the energy demand, and how this should evolve towards post-carbon concept, from two viewpoints: that of the infrastructures in relation to urbanisation and land-use schemes, and that of the life-styles and behaviours in relation to the technologies that should be available. The project deepened the question of urbanisation and land-use from the renewable energy perspective, including that of the systems (centralised/dependence versus decentralised/autonomous). Last, PACT did investigate the role of social forces, actors, stakeholders in the transition process toward this post-carbon concept. It was noticed in particular that Government and political movements don't play a role in building the opinion and behaviour of the adolescent, but educational and cultural context (school, in particular) do.	to a great extent	somewhat	to a great extent	innovations, economics

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
PACT	Infrastructural, lifestyle and behavioural change towards a sustainable post-carbon society: technology development, social analysis, scenario planning	The PACT project aims at shaping what a sustainable post-carbon society would look like and how we could reach it within the next 50 years. It will focus first on what shape the energy demand, and how this should evolve towards post-carbon concept, from two viewpoints: that of the infrastructures, in relation to urbanisation and land-use schemes, and that of the life-styles and behaviours, in relation to the technologies that should be available. It will then deepen the question of urbanisation and land-use from the renewable energy perspective, including that of the systems (centralised/dependence versus decentralised/autonomous). Last, PACT will investigate the role of social forces, actors, stakeholders in the transition process toward this post-carbon concept. The ultimate objective of the project is to complement these analytical components with an attempt to quantify scenarios of post-carbon societies, at the world level.	to a great extent	very little	somewhat	engineering
PARTES	Participatory Action Research, Sustainable Development,	comparing Participatory Action Research approaches and methods in the field of community environmental planning implemented by Universities in different Southern contexts, with a case study in Eastern Sicily. In Memphis, VAC is trying to affect decision-making for the benefit of the most disadvantaged, led by a social justice ideal, and deeply inspired by the US Civil Rights debate. In Sicily, the Simeto Coalition is working in favor of a new social organization able to establish a new alliance with Mother Nature, led by an environmental sustainability ideal, but also within the context of the local anti-mafia movement	to a great extent	to a great extent	somewhat	culture, history, economy,

PASODOBLE	Air quality Decision-support tool, air quality management system, others	Integrate air quality observations from space and develop localised information to develop information and tools that boost monitoring, assessment and forecasting for enhanced quality of life and economic gains.	to a great extent	very little	somewhat	Natural science, information technologies
PATHWAYS	Transition pathways, and methods to assess progress towards desired sustainability transitions	Overall objective of the PATHWAYS project is to provide policy-makers and other key stakeholders with better insight in transition pathways for key domains relevant for EU policy (electricity, heating, mobility, agro-food, and land use & biodiversity). It will achieve this by providing a detailed mapping of key alternative transition pathways (In terms of its technical, economic, political and social dynamics characteristics) among other things.	to a great extent	somewhat	to a great extent	Social sciences, policy studies
PAYT	The approach of Pay-As-You-Throw in waste management is to realise the 'polluter pays' principle in a fair manner by charging people in accordance to the amount of waste, which they actually generate.	As a result, a handbook has been generated which provides a synthesis of all the research findings. Its format suits policy makers, who regard variable rate pricing as an option for urban management and planning. Additionally, it is comprised of information suitable for the pre-identified knowledge needs of urban decision makers, giving them practical advice to overcome obstacles and consider vital facets of PAYT.	to a great extent	to a great extent	to a great extent	Waste Management
PEP	Public engagement in crisis management	Identifies best practices in a community approach to crisis resilience, and gives directions for future research and implementation, including the use of social media and mobile services.	not at all	to a great extent	somewhat	Disaster management, information and telecommunication tech

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
PERARES	Science Shops	PERARES aimed to strengthen interaction in formulating research agendas between researchers and Civil Society Organisations (CSOs). Thus, through increased, better structured co-operation, more researchers and CSOs now engage in incorporating the needs, concerns and knowledge of civil society in research agendas. 10 Science Shops were set up (mediate or perform research on request by CSOs), and transnational web portal for info sharing.	very little	somewhat	somewhat	Science communications and research

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
PERIURBAN	community based budgeting, flexibility and diversity, pro poor approaches, gender sensitivity, participatory methodologies, energy policy	Peri-urban refers to the expanse of land or region located on the outskirts of a city or town. Efforts have been taken to better understand this setting along with its diversity and policy challenges with particular regard to energy and transport. The PERIURBAN project has sought to identify inner links between socio-economic and environmental processes and to comprehend current institutional mechanisms. Furthermore, pressures placed on natural resources caused by energy and transport were also examined. Geoscientists took a multidisciplinary approach to impact assessment techniques which will be useful to the communities in developing countries. A policy workshop in Delhi, India in September 2005 generated many important findings regarding what peri-urban policy needs to entail. Among these were what should make up the basic elements. Topics included were sustainability, reliance on community based budgeting, flexibility and diversity, a pro poor and gender sensitive element and reliance on participatory methodologies. Also included were policy options for energy in the peri-urban interface. The knowledge obtained has been disseminated in both technical and non-technical formats. As a result, these efforts should make a positive impact on food security, health and overall quality of life, hence leading to the sustainable economic and social and scientific development of India.	to a great extent	to a great extent	to a great extent	geoscience
PHAEDRUS	Hydrogen fueling infrastructure	Developed and investigated the feasibility of a scalable hydrogen refuelling station	to a great extent	not at all	not at all	Energy, transportation

PHENOTYPE	Green spaces: roof gardens, city parks, court yards,...; "Greenery": forests, nature reserves/parks, mountains, farmland, trees, landscaping,...; Blue spaces: water such as canals, ponds, creeks, rivers, beaches etc.	Indications exist that close contact with nature brings benefits to human health and wellbeing, but the mechanisms are not well understood. Most of the research has been conducted in the Northwest of Europe and USA. This leaves a need for a more robust evidence base on links between exposure to natural outdoor environment and human health and well-being across Europe. Furthermore, inconsistency and variation in indicators for green or natural space have often made it difficult to compare results from different studies. PHENOTYPE is intended to provide a better understanding of the potential mechanisms, and better integration of human health needs into land use planning and green space management.	somewhat	somewhat	somewhat	health sciences
PHENOTYPE	Integration of human health needs into land use planning and green space management	This research has explored the interconnections between exposure to natural outdoor environments (rural and urban settings) and better health and well-being. The work focused on different European regions and on different population groups, with implications for community-level solutions for improved quality of life.	to a great extent	somewhat	to a great extent	Health sutides / Urban Planning
PLACES	Science communication activities and policies	PLACES Networks partners developed a common platform for a wide and diverse community of actors to promote the cooperation in their science communication activities, and to develop science communication policies at city/regional level. Involving a wide and diverse community of actors, including citizen engagement, is a central aim.	somewhat	to a great extent	to a great extent	Science communications

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
PLASCARB	food waste	<p>PlasCarb has been stimulated by a transnational consortium of R&D performing SMEs in partnership with specialist scientific resource, life cycle thinking experts, industrial customers, and access to risk finance to facilitate future market uptake. It will integrate commerce with research, transforming a widespread urban solid waste environmental problem (140 million tonnes of food and plant waste produced annually in Europe) into a sustainable source of significant economic added value, (high value graphitic carbon and renewable hydrogen). The vast majority of hydrogen and carbon used today in industry derived from fossil petroleum sources, the majority of which are imported into the EU from regions which are often politically unstable. PlasCarb will integrate an established technology (anaerobic digestion) with innovative, low temperature microwave plasma processing and leading edge control of carbon morphology and purification. This project will extend beyond current Best Available Techniques in the valorisation of food waste of anaerobic digestion (AD) to generate renewable energy; it will transform the biogas output from AD using an innovative low energy microwave plasma to split biogas methane into high value graphitic carbon and renewable hydrogen (RH₂). The quality and economic value of the carbon and the hydrogen will then be maximised through the integration of high quality research and industrial process engineering expertise. The project will validate at a pilot scale continuous operation of the integrated process for a period of one month; 150 tonnes of mixed food waste will be digested to generate over 25000m³ of biogas</p>	somewhat	not at all	not at all	private company developing tech

PLUS	Policy-making: Innovative typologies of contracts, a Chart for digital workers' rights, taxation and regulation guidelines, social enterprise pilots and educational patterns for new skills	The project focuses on this specific and meaningful segment of the so-called Industry 4.0 revolution because it summarizes all main opportunities and challenges for the future of work, social innovation and a fair growth. It aims at understanding and tackling challenges posed by digitization of labour.	somewhat	somewhat	to a great extent	multi-disciplinary legal, socio-economic, political, historical approach
POCACITO	"Post-carbon" economic model	At the core of the project is a series of participatory stakeholder workshops in the case study cities to construct a common post-carbon vision for 2050 and roadmap. Other initiatives of the project include the development of a typology of post-carbon cities.	to a great extent	somewhat	to a great extent	Urban policy/planning studies
POLICYMIX	Financial instruments for conservation policy	POLICYMIX aimed to contribute to achieving the EU's goals of reversing trends in biodiversity loss beyond 2010 through the use of cost-effective and incentive-compatible economic instruments. It focused on the role of economic instruments in a mix of operational conservation policy instruments.	to a great extent	somewhat	not at all	political science

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
POWER2YOUTH	Gender-sensitive and youth-centered policies/ building a regional knowledge base (based on local knowledge)	The project (1) explores the root causes and complex dynamics of youth exclusion and inclusion in the labour market and civic/political life, (2) investigates the potentially transformative effect of youth agency (including unorganized mass/collective behaviour) and (3) develops progressive and youth-informed policy guidelines for national and supranational policy-makers.	not at all	to a great extent	very little	Youth studies
PREPARED	Adaptation solutions for the water sector to cope with the climate change challenge - planning and rehabilitation programmes of local water policies	The project addressed the practical problems and decisions that urban water utilities could face as a result of the changing climate. The different tools and solutions developed through this project were demonstrated in some of the 14 participating cities.	to a great extent	somewhat	somewhat	Sanitation / Climate

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
PRIMUS	governance, knowledge brokerage	<p>The PRIMUS project has been designed to bridge the gap between research on the European level on one hand, and policy-making at (and for) the local level on the other hand. The theme chosen for this 36-months coordination action is 'sustainable urban management', thus covering the way how the various policy areas of urban development (energy/water/waste, transport, planning and design, social inclusion, etc) are integrated, rather than one of these themes in particular. This focus is based on the assumption that the decoupling of environmental degradation and economic growth can only be achieved through a better management and governance of the largely inter-dependent issues of urban development. Indicators and information systems, efficient and effective policy processes, and innovative public participation are the main instruments to set ambitious targets, gain wide acceptance, and implement behavioural changes in society. The project is built around a series of events of different nature - so-called Connection Fora, Linkage Fora and Implementation Fora - linking into and building upon each other. They convene local governments from across Europe, researchers in the field of urban sustainability management, and national ministries and agencies dealing with sustainability policies directed at the local level in their respective Member States. A pilot dimension of the project is the 'explorative application' of two selected research-based tools for sustainable urban management by some 100 local governments throughout Europe. This application should explore the connectivity between research and policy-</p>	to a great extent	somewhat	to a great extent	policy studies, urban studies, environmental science

proGIneg	Co-designed nature-based solutions (in urban living labs)	proGIneg Living Labs will develop NBS which are citizen owned and co-developed by state, market and civil society stakeholders. Innovation will take place on the technical level through the NBS deployments, on the social level through co-designing, co-creating and co-implementing NBS with local communities and on the economic level through combining NBS with market-ready business models. Four follower cities in Eastern and Southern Europe (Cascais PT, Cluj-Napoca RO, Piraeus GR, Zenica BA) will be co-steering the research process to assure replicability and adaptability to their local context resulting in urban plans for NBS deployment.	to a great extent	to a great extent	to a great extent	landscape architecture

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
PROPOLIS	ICT applications for analysing urban land use and transport policies in order to reduce pollution	More than three-quarters of the population of Western Europe live in cities. The problems of growing traffic and the sprawl of urban areas together with the associated adverse environmental, social and economic impacts are experienced everywhere in Europe. Methodologies are needed for predicting and mitigating negative changes and for bringing about positive ones. PROPOLIS project addresses these issues by enabling the prediction of the impacts of urban transport and land use policies. The objective of PROPOLIS is to research, develop and test integrated land use and transport policies, tools and comprehensive assessment methodologies in order to define sustainable long-term urban strategies and to demonstrate their effects in European cities. The work is executed through developing a set of indicators measuring the environmental, social and economic components of sustainability. Values for these indicators are calculated using enhanced urban land use and transport models and new GIS and Internet based modules. A decision support tool is used to evaluate the sets of indicator values in order to arrive at aggregate environmental, social and economic indices for the alternative policy options. To include the long run land use effects, a time horizon of 20 years or more is used. The approach is likely to produce innovative policy	somewhat	to a great extent	to a great extent	ICT
PSI-CONNECT	Innovative knowledge brokering (such as simulation games, group model building, future scenario building and role playing)	The project used a novel approach to enhance collaboration among stakeholders in the field. By employing innovative knowledge brokering instruments, it was able to bring researchers, river basin managers and policymakers in water management and climate change much closer together.	to a great extent		not at all	Climate change studies/water management studies

RAMSES	Reconciling Adaptation, Mitigation and Sustainable Development for Cities	Science for cities in transition. Project output includes a website with over 100 interviews with actors and a transition handbook. Final RAMSES event "Cities and Climate Conference 2017" took place 2017 in Germany at the Potsdam Institute for Climate Impact Research. It developed a set of innovative methods and tools to quantify the impacts of climate change and the costs and benefits of adaptation to climate change and thus provide the evidence to enable policy makers to design adaptation strategies.	to a great extent	very little	to a great extent	Reconciling Adaptation, Mitigation and Sustainable Development for Cities

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
REACHOUT	close-to-community (CTC) providers of health care	There has been renewed global interest in the roles and use of close-to-community (CTC) providers of health care to achieve universal health coverage. Existing research has shown CTC providers to be effective in expanding the reach of services and improving health in certain circumstances but the focus is often country specific and focused on one disease only. In practice, disease-specific (vertical) programmes (e.g. tuberculosis, malaria or HIV control) use CTC providers as the final common pathway for expanding access to all their programmes. CTC providers are torn between the competing demands of various programmes, having multiple supervisors and reporting structures and with limited holistic support and poor coordination of their work. Little is known about the experiences and perspectives of CTC providers themselves and whether expanding this largely voluntary cadre is an overall effective, equitable or efficient way of achieving universal health coverage and the broader Sustainable Development Goals. REACHOUT is a multi-country study conducted in Africa and Asia that set out to explore this gap and generate evidence able to inform policymakers at both global and national level. REACHOUT's overall aim is to understand and improve the equity, effectiveness and efficiency of CTC services in rural areas and urban slums in six countries in Africa and Asia: Bangladesh, Ethiopia, Indonesia, Kenya, Malawi and Mozambique	not at all	to a great extent	not at all	medicine

RESFOOD	Resource-efficient food chain technologies/tools	Project develops technologies and tools to overcome barriers to a resource-efficient food chain, leading to a reduction of water, nutrients and energy use and the recovery of valuable materials. Besides research and demonstration of water- treatment, disinfection and reuse, attention is paid to improve food safety through new and fast monitoring and detection methodologies.	to a great extent	not at all	not at all	

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
RESILIENT	Distributed energy projects	RESILIENT addresses the design, development and instantiation of a new system of interconnectivity between buildings, Distributed Energy Resources and grids, assessing the associated energy and environmental benefits. Undertook pilot projects in UK, Belgium, and Italy.	to a great extent	somewhat	to a great extent	Renewable energy/distributed energy
RESPECT	research into respect and tolerance	Tolerance has been increasingly invoked as the inspiring ideal of a number of social policies in European democracies. Appeals to tolerance have animated especially the political debates on those policies addressed to accommodate minorities' requests. Amongst such requests those for the allocation of public spaces have recently acquired pride of place in the political agendas of many European and extra-European countries (e.g. the allocation of space for Roma sites; Muslims requests to build places of worship). Despite such a generalised political and societal relevance of the notion of tolerance, some problems may occur when policies inspired by it are implemented. In particular, the implementation of tolerance-inspired spatial policies may result in the marginalisation of differences and thus risk undermining social cohesion. What conception of tolerance may be invoked to limit such a risk?	not at all	to a great extent	somewhat	sociology, urban studies, policy studies

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
RESPIRO	Development of RESPIRO Guides (based on CSR in procurement, textiles and clothing)/ organisation of Sounding Board meetings (to ensure that the guidance on SRP developed in the project is relevant and useful for end-users)	The RESPIRO project facilitated and promoted an exchange of experiences regarding the inclusion of social and ethical requirements (based on CSR principles) into procurement actions and the textiles and clothing sector.	somewhat	to a great extent	not at all	business ethics
RESPONDER	Household consumption decisions; participatory system mapping	RESPONDER deals with potential political, social and economic contradictions between sustainable consumption and economic growth. The project focuses on consumption decisions made by private households, considering their rationalities, options and factors affecting their decision making, and focusing on the impacts of these decisions on sustainability and/or economic growth as well as viable policy options. To gain an integrative perspective, research findings from social-psychology oriented research on consumer behaviour will be linked with macroeconomic theories on and approaches to economic growth (and thereby also to the debates on green growth, beyond growth and de-growth).	to a great extent	somewhat	very little	sustainable consumption (social psychology, behavioural economics)

SECOA has studied 17 coastal metropolitan/urban areas of international/national-regional importance and 26 environmental contrasts/conflicts in 8 countries in Europe and Asia. The research has confirmed that climate change is one of the most important challenges for all the coastal areas that have been studied. The most important	multi-criteria analysis of environmental conflicts; "fingerprints", adaptive management, consensus building, participation, social learning,	Urban settlements, following the economic crisis of the 70s, entered in a process of regional and urban restructuring to gain a new image at the international level. As a result of the renewed economic success new flows of permanent, semi-permanent, temporary and daily "human mobility" followed: (i) for consumption (leisure and tourism), (ii) for production (labor migration). The world competition among metropolitan areas highlighted the essential importance of natural and cultural resources. The project considered the effects of human mobility on urban growth and restructuring in coastal areas where (i) environment is more fragile and space limited, (ii) every phenomenon is more concentrated and (iii) effects on natural and cultural environment are more acute. Problems are multiplied since the climate change affecting environmental parameters such as sea levels - increases risks of flooding, propagation of pollutants, dislocation of a great number of settlers. Different interests, uses and users acting in coastal areas are contributing to growing conflicts among stakeholders. Mitigating the conflicts and managing the scarce resources was one of the aims of the SECOA project. An integrated ecosystem approach - incorporating social, economic and natural disciplines - is essential for understanding and dealing with the complex and dynamic problems those coastal urban environments are facing.	somewhat	somewhat	to a great extent	interdisciplinary (social, economic, and natural science approaches to ecosystems)

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
SHARECITY	Food sharing (cooperative, lending, gifting)	With planetary urbanization fast approaching there is growing clarity regarding the unsustainability of cities, not least with respect to food consumption. Sharing, including food sharing, is increasingly being identified as one transformative mechanism for sustainable cities: reducing consumption; conserving resources, preventing waste and providing new forms of socio-economic relations. However, such claims currently rest on thin conceptual and empirical foundations. SHARECITY will identify and examine diverse practices of city-based food sharing economies, first determining their form, function and governance and then identifying their impact and potential to reorient eating practices. The research has four objectives: to advance theoretical understanding of contemporary food sharing economies in cities; to generate a significant body of comparative and novel international empirical knowledge about food sharing economies and their governance within global cities; to design and test an assessment framework for establishing the impact of city-based food sharing economies on societal relations, economic vitality and the environment; and to develop and implement a novel variant of backcasting to explore how food sharing economies within cities might evolve in the future. Providing conceptual insights that bridge sharing, social practice and urban transitions theories, SHARECITY will generate a typology of food sharing economies; a database of food sharing activities in 100 global cities; in-depth food sharing profiles of 7 cities from the contrasting contexts of USA, Brazil and Germany, Greece, Portugal, Ireland and Australia;	to a great extent	to a great extent	to a great extent	social science/collaborative/transdisciplinary

SIS CATALYST	Child-centred education, responsive to global social and environmental issues	As one of the very first Mobilisation of Mutual Learning Action Plans, SiS Catalyst: Children As Change Agents for the future of Science in Society was an ambitious project based on a very simple idea that: 'as children are the future, we must involve them in the decisions of today.' Through the development of this idea the project attempted to initiate new thinking and practice required to address the global challenges of the 21st century. During the four-year funding period more than 50 organisations from over 30 countries were involved, working and learning together on a collective experiment to develop a model for a new educational ecosystem that places children as the drivers of the learning experience. What the project has illustrated is that spanning the many countries involved, a common feature is inequality in access to knowledge, education and then opportunity. But while this inequality is common, those who suffer from it is not. It is defined locally, the product of historical, economic and cultural forces. The experiences of those brought together by SiS Catalyst show that while the challenges facing the world may be global, the solutions are to a great extent intensely local. They require the building of an ecosystem to engage children that is nuanced, flexible and sensitive to local context if it is to thrive.	to a great extent	to a great extent	very little	education

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
Smart-U-Green	new forms of urban landscape management.	Some transformations are desirable, such as greener urban landscapes. Some are inevitable, such as changing consumer habits affecting downtown shopping areas. Urban landscape transformations come with conflicts involving many actors. Bottom-up initiatives, such as community gardens, introduce new forms of urban landscape management. Smart-U-Green will investigate these developments in urban regions in the Netherlands, Italy, and France with input from other countries. Together with local governments, local businesses, citizen initiatives and NGOs the project will develop new forms of governance.	to a great extent	somewhat	to a great extent	urban landscape management/geography/planning

SYRTO	Systemic analysis of financial and economic risks at global level	SYRTO stands for SYstemic Risk TOMography. This project conceived sovereigns, banks with other financial intermediaries (BFIs) and corporations as a complex system to be inspected by sectioning each main part of it, then understanding how these “parts” of the system are related to one another in terms of systemic risk. Based on this perspective, we analysed the financial system as a “biological entity”, to be monitored closely to identify the main risk signals and provide the right measures of prevention and intervention. In more depth: 1. We assembled an Early Warnings System (EWS) to be used as risk barometer for each sector and countries alike, identifying potential threats to financial stability; 2. We realized a SYRTO Code in order to detect a series of recommendations, also expressed in terms of EWS prescriptions, on: (a) the appropriate governance structures for EU to prevent and minimise systemic risks; (b) the best mechanisms for ensuring an effective interplay between, and coordination of, macro and micro-prudential responsibilities. The realization of these targets has been conceived in a step-by-step process in which: First, we inspected idiosyncratic risks within the financial system thereby making clear the more important risk predictors and how these are related to: (a) sovereign risk, (b) banks and other financial intermediaries risk; (c) non-financial corporates risk; Second, we inspected both the two-way and multi-way risk connections among macro-sectors (sovereign, bank and other financial intermediaries, corporates), by elucidating the risk linkages and related transmission channels; Third, we assembled an overall EWS and	not at all	not at all	not at all

TENSE	policies that mitigate the uncontrolled expansion of transport movements to exurbia	Cities are expanding outwards in an unsustainable fashion. Urban sprawl is a phenomenon that is becoming increasingly evident at the fringes of cities of the developed world. The transportation required to support such low-density extra-urban habitation requires vast energy consumption and produces very high level of greenhouse gas emissions. This level of transport consumption both for personal mobility and for freight movements (including urban deliveries) runs contrary to global and European policies regarding emissions and energy reduction. The level of increase in overall transport movement in the exurbia of cities remains unknown. This project aims to fill in that gap and address policies that could mitigate its uncontrolled expansion.	to a great extent	not at all	somewhat	geography/planning
TEPSIE	Social Innovation	The TEPSIE consortium of leading European research institutions and global experts in social innovation designed a programme of work to build the theoretical, empirical and policy foundations for building social innovation in Europe. The objective of TEPSIE's work was to prepare the way for developing the tools, methods and policies which will be part of the EU strategy for social innovation. Its purpose was to strengthen the foundations for other researchers, policy-makers and practitioners so that they can analyse and plan with greater confidence. As such, TEPSIE has mapped the field, reviewed theories, models and methods and identified gaps in existing practices and policies, as well as pointed towards the priorities for future strategies.	to a great extent	to a great extent	very little	interdisciplinary

TRANSIT	Transformative Social Innovation through translocal networks	In 2013, the European Union invited the scientific community to more systematically study the role of social innovation in addressing societal challenges. This call was linked to an increasing interest in the ways that social innovation could contribute to solutions to many of the problems associated with government budget cuts, stagnating economies, high unemployment, and other pressing social needs and environmental concerns. Starting from a contention that 'business as usual' approaches were not enough, a group of researchers joined forces to better understand the relation between social innovation and transformative social change. Under the banner of the TRANSIT project, our aim was to develop a theory of transformative social innovation, based on learning from empirical cases. We embarked on a journey of theorising transformative social innovation, informed by previous work in transition research, social psychology, political theory, institutional theory, and several other fields, and grounded in the data obtained from new empirical research on some 20 translocal social innovation networks and 100+ related social innovation initiatives; we studied for example the Global Ecovillage Network, as well as individual ecovillages in Germany, Portugal, Scotland and The Netherlands.	to a great extent	to a great extent	somewhat	transition studies and social innovation theory

TRANSLATE DEMOCRACY	communication in multilingual settings	To what extent is democratic communication possible in multilingual societies and transnational deliberative forums involving citizens and decision-makers? This question is relevant for European policy makers as well as for citizens wishing to communicate their messages in public debate about the future of Europe (EC 2008). Designed as a pilot study, the project has explored the relevance that activists' innovative practices of 'political translation,' developed for transnational deliberative publics in social movements, can have for deliberative democracy experiments at domestic level, to include different linguistic groups in democratic public dialogue. The project has explored the diffusion of a genuine knowledge on political translation resulting from multilingual democracy experiments in European social movements groups with activists and local decision-makers in the United States. Based on a unique empirical comparison of deliberative forums and social movements in the United States and Europe, this project considers the impact of multilingualism on democratic deliberation in transnational, and in increasingly multilingual and globalized societies and deliberative forums.	not at all	to a great extent	not at all	sociology

TRANSMANGO	Food security; food systems resilience	TRANSMANGO aims to obtain a comprehensive picture of the effects of the global drivers of change (climate, economic concentration and market structure, financial power, resource competition, marginalization, property rules, geo-political shifts, consumer preferences, consumption patterns and nutritional transition) on European and global food demand and on raw material production (and, consequently, on food flows).The research focuses on the vulnerability and resilience of European food systems in a context of socio-economic, behavioral, technological, institutional and agro-ecological change and aims to enhance understanding of the new challenges and opportunities that the food sector will face in the future. Vulnerability assessment methodologies and dynamic modeling tools will be reviewed, upgraded and developed to assess the resilience of Europe's agro-food sector and food security situation and to understand the sustainability frontiers of different food production systems under the new unfolding conditions. The project will collect analytical data that will be used to design scenarios for the desired transition pathways in the food system. Based on these scenarios, TRANSMANGO will provide guidance to support the transition towards sustainability and will offer recommendations to address Europe's medium- and long-term food security.	somewhat	somewhat	very little	biosciences

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
TRANSPLUS	Project includes 3 strategic approaches towards sustainable transport: collective transport promotion; promotion of non motorised modes; restriction of motorised individual transport	European cities are affected by pollution and congestion problems created by unsustainable transport patterns. This, to some extent, could be addressed in the long run by integrated land use and transport planning. The current problem to be solved is the lack of a consistent and widely spread bulk of knowledge and coherent institutional/action framework to integrate land use and transport policies at urban, regional and national level. This integration process is to be made towards common goals of sustainable transport and urban development (...) The project embraces an integrated land-use and transport planning approach to manage transport demand and contribute towards the creation of a common understanding of the issues at stake and the possible ways to tackle them. TRANSPLUS initiates and fosters a continuous learning process involving consultants and European cities interested in exploring and adopting innovative policy measures.	to a great extent	somewhat	to a great extent	planning
TRECKQUITY	Tracking approach of the multiple dimensions of social equity in their conservation efforts (survey, datasets & tool)	Thanks to TRECKQUITY, conservationists now have access to an innovative approach for tracking the multiple dimensions of social equity in their conservation efforts. This includes: recognition (rights, cultural identities and traditional knowledge systems), procedures (accountability, access to justice and participation in decisions, transparency), and distribution (burdens and sharing of benefits).	to a great extent	to a great extent	not at all	Multidisciplinary / conservation

TRENDSETTER	transport measures that increase air quality and quality of life (like public transport and other alternatives to cars)/ and approaches to improve logistics	TRENDSETTER's objectives are to ameliorate urban air quality and noise levels, and congestion while supporting exceptional mobility and urban quality of life. It will help other cities see how they can curb unsustainable traffic growth by using advanced mobility management schemes combined with clean vehicle fleets. TRENDSETTER aims to promote the use of public transport and other alternatives to private cars but also show new ways to improve goods logistics and efficiency. The project will increase the acceptance for bio-fuels among citizens and encourage operators, politicians and social groups to use innovative, low-noise and low emission technology by practical day-to-day operation.	to a great extent	somewhat	to a great extent	?
TRUST	Water management, participatory governance, integrated infrastructure management	TRansitions to the Urban Water Services of Tomorrow (TRUST) is an integrated research project funded by the European Union. Over the course of four years and driven by the need of transformation and the wish to protect natural resources, 30 partners in eleven different countries will research innovations and tools to create a more sustainable water future. The results will be implemented and tested in nine participating different pilot cities or regions, grouped in green cities, water scarcity regions and urban/peri-urban metropolitan areas. All the information and products resulting from the project will be made available in this website.	to a great extent	somewhat	to a great extent	multidisciplinary

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
TURAS	urban resilience, participatory governance (public-private partnerships)	TURAS is the acronym for the European Union funded project 'Transitioning towards Urban Resilience and Sustainability'. TURAS is also the Gaelic word for 'journey', or more precisely a journey of exploration or renewal, which in this case is a re-examination of how we build resilience in our cities, towns and neighbourhoods. The TURAS project was designed to bring together academic researchers, local authorities, and SMEs in collaboration with urban communities-of-interest and neighbourhoods to research, develop, demonstrate and disseminate strategies and scenarios to enable European cities and their rural interfaces to transition towards vitally-needed resilience. To ensure maximum co-creation potential the project devised an innovative, though untested, multiple twinning approach bringing together decision makers in local authorities with SMEs and academics to ensure meaningful results and real change are implemented over the duration of the project and after. Eleven local authorities or local development agencies were involved as key actors and partners in the project. They were central to a successful project like TURAS because they oriented all research and development from the outset towards the most significant sustainability and resilience challenges facing their cities. Nine leading academic research institutions and eight SMEs worked with these public sector bodies helping them to build resilience strategies through proposing new visions, feasibility strategies, spatial scenarios and guidance tools to help cities address complex, wicked challenges.	to a great extent	very little	to a great extent	multi- and transdisciplinary

URBAN INEQUALITY	multiple strategies for addressing urban inequality in global south	The “Urban Inequality” project (301541) reviews urban strategies, city visions and other forms of citywide planning in several cities in the global South. Specifically, the project analyzes how these strategies address socio-spatial inequality and divisions. It focuses on locally produced visions and strategies in Cape Town and Johannesburg in South Africa, and Mumbai and Delhi in India. It also examines their interrelations with urban strategies sponsored by international development organizations, such as the World Bank. Through these case studies, the project compares how urban strategies in different institutional, social and cultural contexts view and act on urban inequality, and what reactions they engender among different stakeholders and communities. The project also analyzes how concepts and ‘best practices’ regarding socio-spatial divisions and disparities in cities are devised and mobilized between international development organizations, national and local governments and urban communities in the global South.		to a great extent	to a great extent	Urban studies

URBAN-NEXUS	Multistakeholder governance, knowledge transfer, partnership building	This coordination action is presented to further the long-term strategic framework for scientific co-operation related to urban research. This will be achieved by enabling knowledge transfer and building a structured dialogue. The ultimate aim is to develop long-term strategic partnerships. The call highlights a range of interconnected issues that must be considered including the environment and urban planning, energy, water scarcity, transport, tourism, technology and innovation, governance and education, social equity and cohesion, and sustainable consumption. Throughout this effort, we are reminded to focus on the critical issues and challenges facing European cities today within the overarching frame of reducing the 'urban ecological footprint'. The essential starting point in meeting the objectives of the call and attaining the necessary impact is the development of a common basis for communication between the diverse stakeholder groups in order to facilitate knowledge transfer and structured dialogue.	to a great extent	somewhat	to a great extent	urban resilience/social sciences

URBS PANDENS	policy strategies with respect to the avoidance of unsustainable environmental and socio-economic impacts of urban sprawl [didnt find them quickly online though]	Urban sprawl is defined as the spread of urban functions and infrastructure into the hinterland. It contributes to local, regional, and global environmental stress. This stress comprises of surface sealing, emission of pollutants due to increased traffic or ecosystem fragmentation. The project seeks to attain across-European overview on the stages and history of urban sprawl, its socio-economic and cultural determinants and its relation to environmental degradation and robust strategies for a transition towards sustainable development. Case studies serve as information base for the identification of patterns of urban sprawl, which are formalized by qualitative models. These models will be used to evaluate policy strategies with respect to the avoidance of unsustainable environmental and socio-economic impacts. In a final step the strategies will be refined for the case study regions to meet their specifics.	to a great extent	not at all	to a great extent	climate impact research/geography

VALORGAS	Biogas production from food waste	The VALORGAS project explores ways to realise the energy potential of food waste through effective collection, pre-processing and optimisation of the fuel conversion technology, and considers how integration of these aspects with improvements to conversion efficiencies can maximise the net energy gains. The work expands our rapidly-developing fundamental knowledge of syntrophic anaerobic microbial interactions, and applies this to the manipulation of reactor conditions in order to achieve stable operating conditions at high loading rates and volumetric efficiencies. It considers methods of upgrading the gaseous fuel product to give an extended range of end user applications and of scales at which this technology can be exploited. The research takes into account issues of biosecurity when using this material, and quantifies the environmental benefits associated with nutrient recycling which can contribute significantly to indirect energy gains. The project combines techniques of waste audit, feasibility study, laboratory scientific investigation, technical-scale trials, plant monitoring, process modelling, life cycle assessment and energy footprinting in order to deliver recommendations for the valorisation with maximum benefit of this energy source as a second-generation biofuel.	to a great extent	not at all	very little	environmental sciences

VELOINFO	biking & web-based expertise centre on bicycle use and planning policies.	The high-level objective of Veloinfo is to enable local authorities and experts in attaining sustainable urban planning by establishing a WWW-based expertise centre on bicycle planning policies and bicycle use, of which the usefulness and continuity is ensured. European cities and transport planners represent supply/demand for expertise; Veloinfo is sustained by these users, ensuring optimal distribution of expertise. Veloinfo's objective is to supply and exchange this type of information on transport and planning level. Veloinfo will offer information and connect user cities to experts and expert institutes. Veloinfo will be open to an array of cities and professionals. This proposal involves the development of the network and its technology based on Collexis, using work package and expert meetings. The network will be demonstrated and evaluated and a business model is made for continuation after the project.	to a great extent	to a great extent	somewhat	?

Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
VENUS	motors	Road transport plays a crucial role in actual society, however pollution (including noise) generated by circulation has become a serious impediment to the quality of life and even the health of urban populations. Moreover, energy consumption by urban transportation has dramatically increased the dependency on petroleum. Progressive vehicle electrification is considered one of the main ways to promote efficiency and to meet broad environmental concerns; yet its greener version, i.e., pure electric vehicle (EV), has not been extended so far due to the insufficient energy density of batteries to provide the desirable autonomy and power. In recent years a technological breakthrough has occurred on this issue: largely driven by the explosion in consumer electronic demand (laptops, digital cameras, etc.) lithium-ion battery technology is reaching energy densities approaching 200Wh/kg and even more due to ongoing research (including current EU funded projects HELIOS, AMELIE and EUROLIION), which makes EVs with practical ranges of >130 km become physically possible while respecting reasonable vehicle size/mass/cost limits.	somewhat	not at all	not at all	mechanics
VIAJEO PLUS	urban mobility solutions (clean/green)	The EU-funded VIAJEO PLUS (International coordination for implementation of innovative and efficient urban mobility solutions) project investigated the best and greenest urban mobility solutions adopted around the world. Acronym	Approaches	Abstract/summary of the project	Sustainability	Justice	Urban	Disciplinary perspective
VIP4ALL	Development of affordable sustainable building insulation material	While the world is experiencing a strong demand for energy savings measures, today still 40% of energy consumption and 36% CO2 emissions in Europe are directly related to the construction sector, due mainly to inefficient insulation materials and systems. On the verge of a major European building retrofitting action that must be put into practice within a deep economic crisis, inevitably traditional thick and cheaper insulation products are still the first consideration, as the best state-of-the-art solution, Vacuum Insulation Panels (VIP) is unaffordable for the majority of homeowners and householders. The building sector has to overcome the biggest dilemma of coping with high mandatory levels of energy savings, at reasonable costs, without losing considerable areas of living space left for insulation. VIP4ALL project aims at developing a true technical and cost-effective VIP solution by using natural minerals and/or renewable organic by-products, as low cost VIP core materials through careful microwaving and doping of minor fumed silica, which will not only cut its final price by 50%, but also guarantee a superior thermal performance and eco-friendly status.	to a great extent	somewhat	somewhat	materials production
